Canadian statistical review

January 1974

ARTICLE:

A Brief Guide to Statistics
Related to Foreign
Ownership in Canada.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 4, Table 6 — Activities of the Unemployment Insurance Commission

This table has been restructured to present current unemployment insurance data. Two new series have been introduced, insured population (D 1248) and average weekly payment (D 1249).

Section 7, Table 6 and 7 — Metals and Non-metallic Minerals

At the request of the source, four new series have been introduced with this issue. The new series are Molybdenum: production (D 2608) and exports (D 2610); Potash (D 2607) and Uranium (D 2609) production.

Financial Flow Accounts

Quarterly financial flow accounts from 1962 to the second quarter of 1973 now are available in machine-readable form from CANSIM. For further information on methodology and concepts, order the quarterly *Financial Flows Accounts* (13-001, \$1/\$4) or contact Mr. J.D. Randall (613-992-8340), Financial Flows and Multinational Enterprises Division, Statistics Canada, Ottawa K1A 0Z8. For data on magnetic tape or computer printouts, contact Mrs. Gina Pilozi (613-995-7406), General Time Series Staff, Statistics Canada, Ottawa K1A 0T6.

For 1962 to 1969, the data incorporates conceptual and statistical revisions. For the period 1970 to the second quarter 1973, the data were compiled on a revised national income and expenditure basis and consequently were not subject to large revisions. Financial flows data also will be available shortly in printed form for the 1962-69 period on the revised basis.

Introduction

This article has been prepared to aid those using statistics in the field of foreign ownership in Canada.¹ The need for such a guide arises for a number of reasons, the most important of which are: (i) relevant information is spread throughout a number of different publications; (ii) the range of statistics available is not always widely known; and (iii) differences in coverage and concept of similarly titled series, designed for different purposes, can lead to the inappropriate use of the available statistics. This guide is not for the specialist but rather for the interested reader who wants to know in general terms what is available and where it may be found. It does not deal with such conceptual issues as "what constitutes control", about which books have been written, nor does it dwell on inadequacies of the statistics in terms of coverage or timeliness, problems of vital concern to the practising statistician.

The basic Canadian source documents for statistics on the extent of foreign ownership of Canadian assets, industrial ownership or control by non-residents, and the scope of non-resident activities in controlled industries are:

- (i) *Canada's International Investment Position*, Catalogue 67-202 (annual),
- (ii) Annual reports on corporations making returns under the Corporations and Labour Unions Returns Act. Catalogue 61-210,
- (iii) *Intercompany Ownership*, Catalogue 61-512 (occasional),
- (iv) *Canadian Balance of International Payments*, Catalogues 67-001 (quarterly) and 67-201 (annual).
- (v) *Foreign-owned Subsidiaries in Canada*.

The above reports are prepared in Statistics Canada with the exception of item (v), which is released on an occasional basis by the Department of Industry, Trade and Commerce.² The objective of this guide is to explain what is available in each of these reports and to attach some qualifications to the statistics they contain.

In addition to these Canadian publications, a considerable body of statistics covering United States investment in Canada and the operations of U.S. subsidiaries and affiliates in Canada is available from U.S. source documents. The main ones are:

- (i) *U.S. Direct Investments Abroad, 1966*, U.S. Department of Commerce,
- (ii) *Survey of Current Business*, various issues, U.S. Department of Commerce,
- (iii) *Multinational Corporations—Studies on U.S. Foreign Investment*, U.S. Department of Commerce,

- (iv) *Special Survey of U.S. Multinational Corporations, 1971*, U.S. Department of Commerce.

Although these publications provide useful supplementary data, differences in concepts and definitions frequently yield figures of a different magnitude from those compiled in Canada. An international group of experts working under the auspices of the International Monetary Fund are presently attempting to produce widely acceptable standard definitions and concepts relating to direct investment.

In order to use the statistics available on foreign ownership, it is necessary to distinguish the various characteristics of the series. There are, in fact, five broad aspects of foreign ownership covered by the Canadian reports: (i) the **overall value** of Canadian financial liabilities to foreigners, (ii) the **relative importance** of foreign ownership measured as a proportion of the total long-term capital employed in important sectors of the Canadian economy, (iii) the **proportion** of total issued share capital owned by non-residents in Canadian industries, (iv) the **extent of control** over Canadian industrial activity and real assets through share capital ownership, and (v) the **operations and financial flows** related to large foreign-controlled subsidiaries. Illustrative numerical examples are presented in an appendix to this note as a guide to these five types of data.

The following sections deal with the nature of the information set out in the five basic reports listed at the beginning.

International Investment

Canada's International Investment Position reports contain comprehensive estimates of Canada's liabilities to non-residents. Estimates of liabilities in the form of direct investment, portfolio investment, and a miscellaneous group including real estate, mortgages, etc. are available separately: together they comprise total foreign long-term investment in Canada.³ The geographical ownership of long-term investment is available for the United States and for the United Kingdom separately, and all other countries as a group.

This set of statistics was designed primarily to answer questions relating to the value of financial claims that foreigners hold against Canada, the form of the claim, the holder of the claim and the debtor in Canada. It then became of considerable interest to be able to answer questions pertaining to the size of these claims in relation to some overall Canadian figures, and ownership statistics were developed on the basis of the ratio of foreign

³ The distinction between foreign direct and portfolio investment rests primarily on whether the investors' participation in the enterprise gives the right to exercise significant control in management decisions. If in fact this control does exist, as generally evidenced by the level of share ownership, the investment is regarded as direct investment. If control does not exist, the investment is regarded as portfolio. The extent of share ownership which qualifies investment as direct investment is defined statistically as 50 per cent or more of equity owned in a single foreign country, 25 per cent owned by single investor abroad or 75 per cent in total owned abroad. Investment in branch operations is automatically treated as direct investment.

* Mr. Randall is Director of the Financial Flows and Multinational Enterprise Division in Statistics Canada.

¹ The terms "foreign" and "non-resident" are used synonymously in this note.

² The most recent statistics relating to reports referred to in (i) Catalogue 67-202 and (iv) Catalogues 67-001 and 67-201 may be "advance" released in the *Statistics Canada Daily*, Catalogue 11-001.

to Canadian ownership of long-term capital employed in major sectors of Canadian economic activity. Depending largely on the degree of share ownership, ratios were also developed showing the extent of foreign control over long-term capital employed in Canada (long-term capital including long-term debt, value of capital stock issued and surplus accounts). The concept of long-term capital employed may be equated, in a very general way, with net fixed assets plus working capital and some readers may find it easier to think of it in these terms.

Assets

Current assets	100
Net fixed assets	900
Long-term financial assets	10
Total	1,010

Liabilities

Current liabilities	50
Long-term debt	400
Capital stock	450
Surplus	110
Total	1,010

Long-term debt (400)+ Capital stock (450)+ Surplus (110)- Long-term financial assets (10)= Long-term capital employed (950)= Net fixed assets (900)+ Working capital (current assets less current liabilities) (50).

The control ratios mentioned previously, and control statistics in subsequent references, are determined by the equity holding of the parent or non-resident direct investors, and are not necessarily indicative of the degree of control exerted over the subsidiary. No official statistics exist which quantify the concept of control in terms of the autonomy of the subsidiary, or Canadian firm, to make financial decisions, export policy, pricing policy, production planning or personnel policy decisions, etc.

Considerable detail is published on direct investment in Canada by country of control and the industry to which investment is classified. An assessment of the form of direct investment, whether net inflows of capital from parent, undistributed earnings, or other factors affecting the value of direct investment, including financial transactions abroad with other than the country in which control resides, revaluations and reclassifications, is provided. The gross flows of capital between parent and subsidiaries related to direct investment in Canada are published for transactions with the United States. The level of direct investment in foreign-controlled Canadian enterprises as well as separate portfolio investment, is provided so that estimates of the degree of leverage—capital controlled by foreign-controlled enterprises—is available.

Foreign portfolio investment estimates are subdivided into the type of debtor, (e.g., the different levels of government, and corporations) and the currency of payments. As with direct investment, country and industry breakdowns are available. Canadian liabilities, other than long-term, including non-residents' holdings of Canadian dollars, Canadian treasury bills held abroad, Canadian Government demand liabilities and money market-type obligations are also included in the international investment estimates.

Supplementary information is provided on the number of Canadian concerns with foreign ownership elements and, as noted above, the extent of foreign ownership and control, expressed as a proportion of the total long-term capital employed is given, by industry, for the U.S., U.K., and all other foreign countries.

A considerable body of information is published on the flows of payments to non-residents arising from their investments in Canada, including dividends paid, profits of unincorporated branches of foreign corporations and interest paid on funded debt.

CALURA (Corporations and Labour Unions Returns Act)

The CALURA reports contain the most detailed picture of share ownership by non-residents in Canadian industries. For each of 33 major industry groups, the size of the industry with different degrees of non-resident share ownership is given. The share ownership size groupings range from less than 5 per cent non-resident owned to 95 per cent and more non-resident-owned. The statistics are designed essentially to throw light on the extent of foreign participation in Canadian industry through share ownership, with the size of industries being measured in terms of number of corporations, assets, equity, sales and profits.

The degree-of-share-ownership series should not be interpreted to mean that foreign ownership extends over the variables used to measure the size of the industry: it simply indicates that non-residents own "x" proportion of issued share capital in "y" industry, of "z" size in term of assets, sales, etc. However, a separate body of statistics in the report provides series in which there is an assumption of foreign control of Canadian industry when non-resident ownership of share capital is more than 50 per cent. In these tables, the measures of assets, equity, sales, profits do in fact indicate the size of elements of the Canadian economy falling under the control of non-residents.

It is important to retain a clear distinction between ownership references in the International Investment sense and in CALURA usage. In the former, it refers generally to foreign ownership of all financial claims including bonds, loans, share capital, as well as a portion of net worth attributable to non-residents on the basis of their share

holdings. In the latter, ownership relates **only** to foreign ownership of issued share capital. Statistics classified according to varying degrees of foreign ownership of share capital in the CALURA report reflect the overall size of Canadian industry with different degrees of foreign-owned share capital.

The differences between the concept of control used in the two publications are much less marked, although each report measures different phenomena of the economy or industry under control of non-residents. In the case of international investment, the extent of control is measured by the capital employed in Canada (long-term debt plus net worth); in CALURA, by assets, equity, sales, etc. The relative importance of these to the total Canadian economy or industry may vary and there is no reason why, within limits, they should not. Put simply, there is no reason to expect that the various dimensions of a single house expressed as a proportion of aggregate dimensions for all houses on a street will be the same. For example, it may represent 5 per cent of total rooms, 10 per cent of total square footage, 7 per cent of total cubic capacity, or 2 per cent of total numbers living in homes on the street.

The CALURA report provides considerable industrial detail, by asset size of companies and on the distribution of taxable income by province, according to whether the companies are foreign- or Canadian-controlled. In general, the CALURA publications break down the main series on foreign control between the United States and all other countries, although for certain selected series, data for the United Kingdom are also presented separately.

A review of this nature, providing only an overview of main statistical series available, of necessity omits reference to special statements and occasional tables which may be mined from the two reports. One or two examples may serve to illustrate the point.

The International Investment report provides, among others, special tables on foreign investment in segments of the financial industry, and changes in the number of Canadian concerns in which foreign capital is invested. It also includes data on long-term funded debt, owned in Canada and abroad, classified to the debtor (e.g., provinces, railways, etc.) and whether payable in Canadian or foreign currencies.

The CALURA report includes information on capital cost allowances and depreciation charged by foreign- and Canadian-controlled corporations, on average asset size of foreign- and Canadian-controlled corporations, and on detailed type of payments to non-residents by Canadian corporations controlled in the United States and other foreign countries.

It is useful to indicate some differences arising from the source material used in compiling the

International Investment and CALURA reports, in addition to those differences referred to earlier in definitions of ownership and measures of control.

- (i) The CALURA series are based on individual corporation returns whereas the International Investment series deal with Canada-consolidated statements for enterprises. The latter concept eliminates certain intercorporate items between Canadian parent companies and their subsidiaries in Canada.
- (ii) In the CALURA series, the corporation is used as the unit for industrial classification, whereas the enterprise (the family of related companies) is used in the International Investment series. Differences in industry statistics arising from this may be particularly acute in fine industry breakdowns because of the diversified conglomerate enterprises, and in areas where enterprises reflect large-scale vertical integration.
- (iii) The CALURA series exempts certain important groups of companies on the basis of their relatively small size, or by reason of their reporting under regulatory legislation.⁴ Specifically, the Act exempts corporations with gross revenues during the reporting period of \$.5 million or less, and assets of \$.25 million or less. An attempt is made to build up the series to a complete coverage (through inclusion of Act "exempt" companies) but in certain cases, the ownership of issued capital shares is not available to permit accurate allocation on the basis of degree of foreign ownership.

Intercorporate Ownership

This report, compiled from returns under CALURA requiring corporations to give the name and address of each corporation owning 10 per cent or more of any class of issued shares, groups together, into ownership complexes, corporations which have common ownership. Basically, the report enables the user to establish for any reporting corporation (i) which other corporations own a significant proportion of its shares; (ii) whether it in turn owns a significant proportion of shares in another corporation; and (iii) what other companies are linked to it through significant shareholdings. It does not reveal whether individuals are significant shareholders, nor does it provide an exhaustive list of relationships because of the omission of some CALURA reporting exemptions, and the break in the chain beyond the first link abroad.

More specifically, each separate complex begins with a corporation that holds 10 per cent or

⁴ Such legislation covers banking, insurance, trust and loan companies, much of the communications and transportation industry, and other federally regulated companies. For more detail, see the CALURA reports.

more of the voting shares of a reporting company but which itself has no corporate shareholder with a holding of 10 per cent or more. The list then traces other reporting corporations which have more than 10 per cent of their shares held either by the originally listed holding companies, or another holding company, and proceeds also to show those reporting companies which in turn are also holding companies. In this way, an ownership complex is built up which, where relevant, provides the links up to the first foreign company which holds more than 10 per cent of the shares.

The holding companies are identified as to the country of the mailing address of the head office, which is assumed to be the country of incorporation of the company, and the percentage of shares that they hold in the reporting company is given. In many cases, the same corporation will appear in a number of unrelated complexes and, in this case, the holding corporation's main complex is identified by cross reference.

The listings do not cover many exempt corporations which, in general, are those providing information under Canadian Government regulatory legislation, government-owned, non-profit organizations, or those below the specified reporting size for CALURA.

Work is now proceeding to overcome problems of updating such a listing to take into account current changes in ownership positions. The relationships now provided in the reports are based on company fiscal years which means that the structures are not all recorded at a single point in time and tend to reflect positions two to three years behind the current time period.

Canada's Balance of International Payments

Quarterly and annual reports in this series, although not providing statistics on the level of foreign claims on Canada, or on the extent of foreign control of Canadian industry, do provide insights on international capital flows associated with foreign ownership in Canada.

The principal series related to foreign ownership are:

- (i) the net capital inflow of direct investment from controlling interests for the establishment of the new concerns, the acquisition of controlling interest in existing concerns and the extension of long-term capital by parent companies to their subsidiaries;
- (ii) portfolio investment by non-residents in Canadian securities; and,
- (iii) the investment income flows of interest and dividends to non-residents attributable to their ownership of claims on Canada.

An important difference between the net flow of foreign direct investment recorded in the balance of payments and the changes in the level of direct

investment recorded in the international investment position should be noted. The balance of payments records **only** net capital inflows from the controlling interest abroad, whereas changes in the book value levels of direct investment involve undistributed earnings attributable to foreign direct investors in Canada, revaluations, reclassifications and other accounting type adjustments. Also included in the international investment definition of direct investment is the investment by others from the country of control, which, in the balance of payments, is regarded as portfolio investment. Consideration is being given to resolving this latter anomaly in the definition.

Foreign-owned Subsidiaries in Canada

These occasional reports published by the Department of Industry, Trade and Commerce are based on quarterly and annual reports of operations and financing submitted by the larger foreign-owned subsidiaries under the survey requirements arising from government policy set out in *Some Guiding Principles of Good Corporate Behaviour*.⁵

The survey is voluntary and covers non-financial companies incorporated in Canada with assets of more than \$5 million and whose voting stock is more than 50 per cent held by a non-resident corporation. The reports, many of which are based on consolidated operations of a number of affiliated firms, are received from more than 300 respondents and cover about 1,000 firms. Although it is clear that results of this survey are far from comprehensive – it is estimated that they cover about one-quarter of sales of all non-financial, non-government corporations in Canada, and over one-half of all business of non-financial corporations in Canada that are more than 50 per cent foreign-owned – they do provide insights into the operations and financing of foreign-controlled subsidiaries not available elsewhere.

The principal addition to knowledge is in the break out of transactions between the subsidiary in Canada and its parent company and affiliates abroad, by eleven major industry groupings. The data provided on this basis include merchandise imports and exports, payments of interest, royalties, managerial and administrative fees and charges for research and development. Information not readily available elsewhere is also provided on the source of funds from parents and affiliates in the form of advances, receivables and sale of equity and from other foreign sources in the form of bank and other short-term loans, bonds and debentures, other long-term debt and equity sales.

The country detail is limited in the series dealing with current international transactions to those with the United States and other foreign

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: Notional Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

year and quarter	gross national product at market prices	deduct:			odd:		gross national product at market prices	deduct:			odd:	
		residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents	gross domestic product at factor cost		residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents	gross domestic product at factor cost

¹ The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i. e. by dividing the unadjusted participation rate by the seasonal factor). ² The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				ratio of inventories owned to shipments
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period or estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". ¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports.

⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), Statistics Canada.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

Table 5: statistics of refined petroleum products¹ (thousand barrels)

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turba fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last current year are not so adjusted.

²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways¹ (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products			
	unadj.	S. A.		wheat	other grain and grain products	fresh fruits and vegetables	other agri-culture products	animals and their products	prepared food products	iran ore and concentrates	other metal ores and concentrates	potash ²	coal, sand, cement and other mine products

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973 only 6 major railways (accounting for 95% or more of the total operating revenues) are shown. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Figures are rounded and may not add to totals shown.

¹For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1972-73. Source: The Canada Gazette.

countries, although transactions of the reporting corporations by country of control separate the United Kingdom from all other foreign countries.

Much of the material in the I.T.C. report presents balance of payments and international investment type information for this particular cross-section of foreign-controlled subsidiaries, e.g., current international transactions, capital flows and level of liabilities to residents of foreign countries. It is, of course, not reconcilable with these other series principally for reasons of coverage, but also because of the adoption, in some cases, of different definitions and groupings of transactions and industries. Because of the limited nature of the survey, the ratios presented may be of greater value for analytical purposes than the absolute dollar amounts.

The introduction to the most recent report provides the following summary of its data content and purpose.⁶

"The operational data consist primarily of revenue derived from the sale of goods and services and of expenditure on goods and services, categorized in each case between domestic and foreign transactions. These data provide a qualitative base for the examination of sales performance in both domestic and export markets and of the degree of the respondents' reliance on foreign as opposed to domestic sourcing for the procurement of goods and services. In addition, the data indicate the extent of reliance of the reporting corporations on parents and affiliates as a market and source of supply.

⁶ *Foreign-owned Subsidiaries in Canada, 1949-1969*, Department of Industry, Trade and Commerce, Information Canada, 1972, Ottawa.

Information is also provided by industry groups which permits industry by industry comparisons both in terms of nature of transactions and changes occurring over time. . . .

The financial information collected in the survey pertains mainly to sources of funds divided between internal generation within the company and those obtained externally, with the latter again divided between Canadian and foreign sources, and to earnings and their disposition. These data permit examination of shifts between foreign and domestic sources of financing, the proportions of net profit paid out as dividends, and other relationships which facilitate assessment of the role of an important segment of international companies operating in Canada."

Conclusions

As a consequence of the brevity of this article, references have been omitted to special ad hoc statistics which have appeared from time to time in various reports. Also, in an attempt to concentrate on providing an overview of statistics available, reference to detailed definitions, refinements and technical adjustments to the figures have been omitted. Despite these shortcomings, it is hoped that the reader will find the above guide useful in providing a starting point for a journey. A journey which will take him through an area touching on almost all aspects of the Canadian economy, covering both financial and production statistics, strewn with conceptual and definitional problems, partly uncharted and having an international dimension not common to the majority of statistical aggregations!

APPENDIX

To use the statistics available on foreign ownership, it is necessary to distinguish the various characteristics of the series. There are in fact five broad aspects of foreign ownership covered by the figures. (The statistics in the examples are drawn from the latest released figures at the time of writing.)

(i) The **overall value** of Canadian financial liabilities to foreigners, which can be summarized simply as the book value of foreign investment in Canada of the following types:

Canada's liabilities	1970
	billions of dollars
Direct investment	25.5
Government bonds	7.9
Other portfolio investment	7.4
Miscellaneous investment	2.7
Foreign long-term investment in Canada	43.6
Non-resident equity in Canadian assets abroad	2.8
Official Special Drawing Rights liabilities	0.1
Total long-term liabilities	46.5
Non-resident holdings of Canadian dollars	0.8
Short-term debt	2.8
Total	50.1

Source: *Quarterly Estimates of the Canadian Balance of International Payments*, Catalogue 67-001, First Quarter 1972, Statistics Canada.

(ii) The **relative importance** of foreign-owned investment measured as a proportion of the total Canadian and foreign long-term capital employed in important sectors of the Canadian economy

Ownership ratios	1969
	billions of dollars
Total long-term capital employed in Canada in non-financial industries ¹	85.0
Long-term capital investment owned by non-residents	29.9
Non-resident ownership ratio	35 %

¹ Includes funded debt, other long-term debt, capital stock and surplus less investment in securities and affiliates.

Source: *Statistics Canada Daily*, October 16, 1973, Catalogue 11-001.

(iii) The **proportion** of issued share capital owned by non-residents and the total size of industry falling within each of the groupings of degree of foreign share ownership:

Non-financial industries – 1970

Degree of foreign ownership of share capital	Total size of industry			
	Assets	Equity	Sales	Profits
	billions of dollars			
Percentages:				
0 - 4.9	62.2	23.8	54.7	2.6
5 - 24.9	20.0	9.4	11.3	1.1
·	·	·	·	·
·	·	·	·	·
75 - 94.9	12.5	7.3	10.2	0.8
95 - 100	32.4	14.9	29.7	1.8

Source: *Corporations and Labour Unions Returns Act, 1970, Part I – Corporations*, Catalogue 61-210, Statistics Canada.

(iv) The extent of **control** over various elements of Canadian industrial activity as determined generally by a more than 50% ownership of issued share capital:

Non-financial industries¹

	Assets		Profits		Capital employed ²	
	billions of dollars	%	billions of dollars	%	billions of dollars	%
Foreign-controlled	48.8	36	3.4	45	30.2	36
Canadian-controlled	80.0	58	3.7	50	54.8	64
Non-allocable	7.8	6	0.4	5	—	—
Total	136.6	100	7.5	100	85.0	100

¹ 1970 figures for assets and profits are from CALURA; 1969 figures for capital employed are from International Investment Position.

² The proportion of total capital employed in Canada **owned**, or the proportion **controlled**, by non-residents does not differ greatly at the total non-financial industry level. In smaller industry groupings, however, it may differ significantly: in railways, capital employed **owned** by non-residents amounts to 17%, whereas capital employed **controlled** by non-residents is equivalent to only 2% of the total.

Sources: *Statistics Canada Daily*, October 16, 1973, Catalogue 11-001. *Corporations and Labour Unions Returns Act, 1970, Part I—Corporations*, Catalogue 61-210, Statistics Canada.

(v) The **operations and financial flows** of large foreign-owned subsidiaries and their transactions with parents and affiliates, of which the following are a **selected** sample:

Item	1969
	million dollars
Total sales	24,500
Exports, total	6,300
Exports, to parents and affiliates abroad	4,500
Total merchandise purchased	14,800
Merchandise purchased abroad	5,700
Merchandise imports from parents and affiliates abroad	4,300
Funds from parents and affiliates abroad	- 38
Funds from abroad during 1969 other than parents or affiliates	118
Bank loans during 1969	- 21
Bonds and debentures	115
Outstanding level of debt to residents of all foreign countries	5,800
Due parents and affiliates	1,900
Paid in capital by parents and affiliates	2,900
Bonds and debentures	500

Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).		*12-531 <i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$1.50 Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)	
11-06	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$.75 (Free to <i>Canadian Statistical Review</i> subscribers.) Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	— <i>CANSIM: Summary Reference Index</i> (Annual, with periodic amendments) 1973 edition—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title from General Time Series Staff.	
11-05	<i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to <i>Canadian Statistical Review</i> subscribers) This publication replaces the <i>Historical Summary</i> 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly <i>Canadian Statistical Review</i> (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the <i>Review</i> . All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.	— <i>CANSIM: Series Directory</i> (Annual, with periodic amendments) 1973 edition—Price \$15.00, or \$20.00 with amendment service. The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title from General Time Series Staff.	
CANSIM Manuals and other Publications*		This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to: General Time Series Staff, Statistics Canada, Ottawa, K1A 0T6.	
-	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title from General Time Series Staff.		
-	<i>CANSIM: Progress Report</i> —Free on request. Order by title from General Time Series Staff.		

Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.

and Revision Project

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Publications of Interest

Publicly-supported Vocational Training Involving the Private Sector, 1971-72, Catalogue no. 81-238, Annual, Statistics Canada, November 1973. Price: \$1.50. This report, the first in a series, presents information on participants in occupational training programs involving private business and industry in their implementation.

Urban Family Expenditure on Shelter and Household Durables, 1971, Catalogue no. 62-540, Occasional, Statistics Canada, Ottawa. Price: \$2.00. This report presents the results of the ninth Statistics Canada survey of urban family expenditure. Data in the report were collected in February and March 1972 and refer to the calendar year 1971. Information is presented on family expenditures for shelter, furnishings and equipment, cars and other vehicles as well as recreation and household appliances. Limited income information is also given.

RECENT CANADIAN EXPERIENCE WITH UNEMPLOYMENT

Helen Buckley*

Introduction

Throughout the past three and one-half years, Canada's unemployment rate has been above 5.5 per cent and, most of this time, above 6 per cent. Unemployment in this latest period, although less prolonged and less severe than that in the years 1957 to 1963, contains several puzzling aspects.

For example, what kept the rate above 6 per cent for a full two years after signs of an upturn in the economy? Why, today, when some indications suggest the economy is operating at close to full capacity, should the unemployment rate remain above 5.5 per cent? Emerging labour shortages are also part of this picture. Although these shortages are partially explained by bottlenecks in the supply of highly-skilled workers, there appear to be difficulties in filling routine jobs which could be performed by almost anyone in good health.

The problem of unemployment with inflation is also under study in the United States. Theories based on past experience have been subject to critical scrutiny and, within the last two years, some promising new directions have emerged – what we might call a “new view” of unemployment.¹

This paper will attempt some explanations in the Canadian context. Section I presents some basic background statistics – these convey the nature and composition of present-day unemployment – and in Section II, we turn to the analysis.

I. WHO ARE THE UNEMPLOYED?

Age-sex

Almost 50 per cent of unemployment is accounted for by teenagers and young adults, a group which makes up only 27 per cent of the labour force. This is probably the main message conveyed by Table 1. Both percentages have moved up since the mid-sixties, but a substantially larger increase occurred in the share of unemployment. Thus, youth unemployment rates have risen relative to adults', as well as absolutely (see also Table 2).²

* Helen Buckley is Co-ordinator, Manpower Research and Development, Labour Division, Statistics Canada.

¹ This paper has drawn mainly on Martin Feldstein, *Lowering the Permanent Rate of Unemployment*, Harvard Institute of Economic Research, Cambridge, Mass. 1972 (mimeo).

² The increase in the youth rate is worth emphasizing because the growing percentage of young people in the labour force is often called upon to explain high unemployment at the present time. The increase in numbers exerts some upward pressure on the overall unemployment rate but not much (standardizing for 1966 age structure, the overall rate in 1973 would be 5.7 per cent instead of 5.8 per cent).

A similar change has occurred in the case of adult women. This group (25 years and over) now accounts for more than 14 per cent of total unemployment and the increase since 1966 is larger than the increase in their labour force share. Women (all ages) now account for 30 per cent of the unemployed.

As other groups have come to occupy a larger share of unemployment, that of men 25 years and over has declined.

In summary, although unemployment rates of adult men are higher in 1973 than in 1966, much larger increases have occurred for other groups: women 25 years and over – up 2 percentage points; younger males – up 4.6 percentage points and younger women – up 4.1 percentage points.

Regional

Higher-than-national unemployment rates in six provinces – the four Atlantic Provinces, Quebec and British Columbia – are clearly an element in the current unemployment picture. But their overall contribution would seem to be much the same as a decade ago. According to Table 3, both Quebec and British Columbia have experienced a slight deterioration, relative to Ontario, during the past decade, but the gap between the Atlantic Provinces and Ontario has narrowed considerably.

Unemployment by Duration

Statistics on the duration of unemployment seem to be a more fruitful source of changing patterns (see Table 4). A first point is that the long-duration rate (unemployed 3 months or more) is still well above the 1966 level. Since the longer a person is unemployed, the more times he/she would be counted in the monthly statistics, increased duration is likely to raise the monthly unemployment rate. Thus, longer spells of unemployment would be one factor which makes the current situation different from the mid-sixties.

The behavior of the short-term rate is also of interest. Short-term (under 3 months) is always a large part of total unemployment – at the present time, approximately 60 per cent. These are mainly persons between jobs or newly entering the labour force, and the category tends not to be a major source of concern. A certain amount of joblessness of this kind is necessary to the operation of a free labour market. However, the short-term rate may deserve closer scrutiny at the present time. Turning to Table 4, we find the short-term rate increasing between 1966 and 1970 (as would be expected from the deterioration in economic conditions) but, unlike the long-term rate, it fails to show much improvement since 1970.

TABLE 1. Percentage Distribution of Labour Force and Unemployed, Canada, 1966 and 1973

	1973 ¹		1966	
	Unemployed	Labour force	Unemployed	Labour force
	per cent			
Both sexes:

THE LABOUR FORCE SURVEY ASSESSMENT AND REVISION PROJECT

Bruce Petrie*

Since the middle of 1972, Statistics Canada has been working on a major project to revise and expand the Labour Force Survey, the source of official monthly estimates of employment and unemployment. This article briefly describes the objectives and major elements of the project, and provides an interim report on progress achieved to date.

The Labour Force Survey is a monthly interview survey of 32,000 households used to collect information on employment, unemployment and related labour force data. The survey was started in 1945 and, since that time, has undergone a number of revisions in the areas of sampling techniques, estimation procedures, and means of compiling and releasing data. However, the basic technique of asking the Labour Force questions and the amount of data actually collected on a monthly basis have remained almost unchanged for 20 years. Although recent expansions in the amount of published data have not yet been fully utilized, there has been, particularly in recent years, a steady increase in the demand for labour market data — a demand which cannot be met using the present Labour Force Survey. The new areas of demand can be summarized in three general categories.

1. The first is a demand for new types of information to give a more sensitive picture of the complexities of the current labour market situation than is revealed by the simple distinction between employment, unemployment, and non-labour force activities. Although there has been relatively little demand for major changes in the underlying concepts and definitions currently used to determine labour force status, there is much interest in identifying more precisely the composition of the three basic categories of employed, unemployed and not in the labour force, particularly in terms of isolating those groups on the borderlines between the three categories. More information on such groups as part-time workers, students, new entrants to the labour force, persons interested in joining the labour force but not seeking work for various reasons, etc., is required in order to provide a better understanding of month-to-month changes in the labour force status of the population.

In addition to the requirements for more information on the composition of the three major groups, there are demands for much new data on a regular basis about the characteristics of the employed, the unemployed and persons not in the labour force. For employed persons, there are demands for more information on such areas as hours of work, multiple job-holding, reasons for part-time work, wage rates and other income data, and a wide range of other variables related to employment and occupation. For the unemployed, data users have requested new information on methods and intensity of job

search activities, more detail on duration of unemployment, information on reasons for becoming unemployed, nature of previous job, sources of income, and many other types of data which might provide a fuller understanding of unemployment and its impact on individuals, society and the economy. For persons, not in the labour force, there are requirements for information on such topics as desire for employment, reasons for not looking for work, when such persons last worked (if ever) and reasons for leaving previous jobs. For all persons included in the survey, much more information has been requested on such characteristics as levels of education, geographic mobility and family status.

2. The second general area of demand is for new information on the dynamic aspects of the labour force, to supplement the twelve monthly "snap-shots" that the Labour Force Survey now provides each year. This involves a demand for much more information on the gross flows between various labour force categories between successive months, and for somewhat longer-run longitudinal information about the labour force patterns of persons during the six months that individual respondents are included in the survey.

The capacity of the present survey to provide longitudinal or flow data is severely constrained by the existing survey techniques and data processing methods. Month-to-month record linkage is extremely difficult using current processing methods, and the limited information available through a question on the previous month's activity is subject to both recall bias and variance caused by changes in respondents within the households in the survey. The demand for flow data is therefore largely unfilled, and there exists a considerable demand for new measures to help explain the dynamic changes in labour market conditions.

3. The third major area of demand is for a larger sample to produce more detailed data, particularly at the regional, provincial and sub-provincial level, but also for finer levels of cross-classification (for example, more detailed industry and occupation breakdowns). The amount of reliable information (that is, data for which the sampling variability is "reasonable") which can be produced, either in terms of small area data or very detailed cross-classifications, is largely a function of sample size. The sample redesign is being carried out in a way that permits a substantial increase in sample size in any given area. Present plans envisage an approximate doubling of the sample size used in

* Mr. Petrie is Project Manager, Labour Force Survey Assessment and Revision Project, and currently, Acting Director of the Labour Force Survey Division.

the present survey, although the amount of the increase in any particular area can vary and will be determined after discussions with the various data users.

It should be noted, however, that there are serious limitations to the amount of extra data that can be produced by an increase in the sample size. The present survey is already the largest monthly sample of households conducted in Canada and one of the largest in the world. Even doubling the size of the sample would not produce much improvement in the reliability of the large total figures which make the headlines each month, since the present sample size is already large enough to achieve a high degree of accuracy in these estimates. What would be gained would be some increase in the reliability of a number of smaller estimates, such as unemployment totals for smaller provinces.

In addition, more detailed cross-classifications would be publishable. But in any event, any manageable increase in the sample size would produce only marginal improvements in estimates for small areas or for fine levels of cross-classification. No reasonable sample size would enable the publication of detailed data at the sub-provincial level, for example. Also, the publication of even major aggregates for smaller cities or very small geographical areas would not be possible. However, the objective of the Assessment and Revision Project is to maximize improvements which may be possible through sample redesign and an increase in sample size.

The three major areas of new data requirements described above cannot be met within the existing framework of the Labour Force Survey. The present survey questionnaire is based on a series of general questions such as "What did you do mostly last week?". This indirect questioning technique works very well in producing the information which the present survey is designed to provide, that is, broad labour force status categories and a limited range of descriptive data. However, to meet the requirements for a great deal more information on the composition and characteristics of the employed, unemployed and not in the labour force categories, a much more direct series of questions must be used. Direct questioning is particularly important for obtaining the precision required for the development of new dynamic or longitudinal estimates.

The direct approach involves the use of specific questions such as "Did you do any work at all last week?" or "Have you looked for work in the last week?". Such direct and probing questions, together with the necessary re-training of interviewers and new collection and data processing techniques, could not be introduced in the existing survey without causing unmeasurable biases or disruptions in the present data

series. In order to meet the important new data requirements, and yet minimize disruptions to current estimates and historical time series, the Labour Force Survey Assessment and Revision Project is in effect developing an entirely new survey. As described below, the revised survey is being developed separately from the existing survey and will run concurrently with it for at least one full year in order to enable satisfactory linkage of the existing and revised data series.

Project Outline and Schedule

The project, which is designed to lead to the introduction of the revised survey early in 1976, has five general phases. The first is a test phase lasting throughout 1973 and the first half of 1974. The objective here is the development of a "failsafe" system that meets all the minimum requirements of the project, expect the increase in sample size. This "failsafe" system, which the LFSARP has named BASIC, is a modified version of the revised United States survey approach which is similar in principle to the approach Statistics Canada wishes to introduce, and has the great merit that it is known to be operationally feasible. This "failsafe" testing phase has two primary objectives: first, to ensure that the United States approach is applicable to the Canadian setting; and second, to develop the full range of operating systems (from interviewer hiring and training to computer processing) required to support a full-scale revised survey.

A second, overlapping phase of the LFSARP involves two general thrusts of activity. The first is a program of extensive consultation with data users to determine, in terms of priority and frequency, their data requirements. The second is a series of experiments and research projects designed to improve on the American approach to questionnaire design, to explore alternative approaches to data collection, to develop an analytical framework for handling the new sorts of data to be produced and to establish the framework for an ongoing program of research that will last well beyond the three-year project. The results of the user consultation and research programs will be incorporated in test surveys to be conducted in conjunction with BASIC in 1974.

The third phase of the Assessment and Revision Project consists of the redesign of the survey sample on the basis of information derived from the 1971 Census. This redesign is a regular feature of the Labour Force Survey, and would take place regardless of the other phases of the Assessment and Revision Project, but, on this occasion, is being conducted in conjunction with the other changes. Included in the sample redesign phase will be consideration of the inclusion of areas not now in the survey, such as the Northwest Territories and Indian Reserves. The redesign also incorporates a number of new sampling techniques.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. ¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross notional product at market prices and gross domestic product at factor cost (millions of dollars)

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included.

²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total.

³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				ratio of inventories owned to shipments
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), Statistics Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. Source: Building Permits (64-001), Statistics Canada.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last current year are not so adjusted.

²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.³Includesbaking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage.⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available.²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970.³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent.⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form.⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects.⁸Bills due for residential/domestic use of telephones, gas and electric power.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important one: Form machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11.²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months.³Includes special transaction-trade, not shown separately.⁴Includes scrap.⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Windup Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. This may be a sign that a larger volume of short-term (or "turnover") unemployment is becoming a more permanent feature of the economy.

Short-term Jobs

Another aspect of unemployment worth noting is that a high percentage of the unemployed have no great length of attachment to previous jobs. A special survey³ of persons who experienced unemployment in 1971, and who had previous jobs (a total of 1.7 million persons) found that:

- 73 per cent had held their last job less than one year;
- 54 per cent had held their last job less than 6 months.

Since weak job attachment is characteristic of younger age groups, this particular distribution is not unexpected in a population (the unemployed) where youth predominates. Yet, it is not entirely attributable to age. In the survey cited, the under-24-years age group was a bare majority in the 73 per cent which reported last job lasting a year or less. It is reasonably concluded that these statistics on tenure have something to say about the nature of jobs — some of them seasonal or temporary to begin with, and some of them so poorly paid and lacking in prospects that the worker departs at the earliest opportunity.

II. WHAT KEEPS THE UNEMPLOYMENT RATE HIGH?

The statistics in the preceding section were selected to convey a broad-brush summary and, at the same time, to highlight certain aspects of unemployment currently stressed in the literature. These include: compositional change in the labour force (more young people and women); the short spells which characterize much of the unemployment; and the briefly-held jobs. All of this adds to a labour market which contains a good deal of movement — in and out of jobs, between

school and work — and the moving (or turnover) involves a certain amount of joblessness. This turnover component is the focal point of much of the research of the past few years concerning unemployment.

1. High Turnover

The "new view" argues that the nature of unemployment has changed radically since the 'thirties. Then, unemployment was a state which lasted for months — if not years — and it was a state to be avoided if at all possible because there weren't enough jobs to go around and the welfare system was rudimentary. But present-day unemployment is different. A high percentage of the unemployment may be "voluntary". The amount of unemployment, therefore, may be less closely related than formerly to the level of economic activity. Because turnover is high, unemployment may remain high even in a buoyant economy.

It is reasonably argued that the amount of movement in the labour market (and resulting unemployment) has been increasing in recent years. This would be expected, for example, from the rising proportion of young people and married women in the labour force, groups which tend to have a weaker job attachment than the prime-age male. This is the change most frequently associated with increased turnover but not necessarily the most important. The Feldstein paper (see footnote 1) selects two other factors for emphasis, the first being the improvements in non-work income sources which make it easier for people to quit their jobs. These include parental affluence, Unemployment Insurance benefits and welfare (easier access, higher payments, etc.).

The second factor named — and this is getting a great deal of attention in the literature — is the continuing prevalence of low-pay dead-end jobs. Where prospects are lacking, the worker may rationally choose a short spell of unemployment, particularly if an income alternative is available.

³ This survey is more fully reported in Bruce MacDonald, "Reasons for Leaving Last Job", published in the 1972 *Notes on Labour Statistics*, Catalogue 72-207, Statistics Canada.

A belief that turnover is on the increase is consistent with the behaviour of the Canadian job

TABLE 5. Increase in Job Vacancies (12-month Averages) by Category, 1971-72

	Absolute increase	Percentage increase
Managerial, professional	970	22.0
Crafts and trades	3,370	73.4
Semi-skilled ¹	4,940	41.8
Semi-skilled ²	3,150	122.1
Low-skill	7,770	132.6
Totals	20,200	69.1

¹ All "semi-skilled" excluding the four categories specified in 2. Includes, for example, truck and bus drivers, clerical and related occupations.

² Four categories: Nursing aids and orderlies, product assembly and repair, salespersons, cutters and other lumbering occupations.

Source: "The Occupational Composition of Job Vacancies", *Canadian Statistical Review*, Volume 48, No. 4, April 1973, Catalogue 11-003, Statistics Canada.

vacancy statistics. During the last two years, with vacancies increasing, many observers have been struck by the small inroads made on unemployment. Although this might be partly explained by skill shortages, data from the Job Vacancy Survey (Table 5) show a relatively small increase in vacancies of that variety. What is also shown in Table 5 is that by far the largest increases have occurred in low-skilled and certain types of semi-skilled categories. For this segment, the increase in vacancies may be a sign not so much of growing employment as of an increase in the amount of turnover associated with the jobs.

2. Slow Growth

Even the most enthusiastic proponents of the new view of unemployment are careful to allow for the continuing relevance of fluctuations in aggregate demand, seasonality of employment, lagging regions, etc. In the Canadian case, we are faced with explaining an unemployment rate of 5.8 per cent which is more than 2 percentage points above the rate in 1966: might it all be put down to compositional change and higher turnover? There are no sure answers to such a question since quantitative estimates are lacking, but there are statistics which support the view that part of the increase in unemployment is associated with a failure to generate enough new employment.

For the past several years, the amount of growth in employment in Canada has lagged the growth in the labour force. The sum of the deficit for the three years beginning 1970 amounts to 180,000 jobs (60,000 per year, see Table 6). A deficit of this size could be expected to have some effect on current levels of unemployment despite the higher level of performance in 1973 when employment growth is running somewhat ahead of the labour force.

The foregoing will seem a well-known dimension of the unemployment problem, readily explained by the downturn in economic activity begun in 1970. What is perhaps less generally recognized – and this also may be seen in Table 6 – is that it was three years earlier that employment growth began to lag the labour force. Employment growth slackened notably in 1967. The lower growth rate, combined with near-record increments to the labour force, was enough to nudge the unemployment rate upwards and the following year – a very poor one from the standpoint of employment – put it higher still. The American experience was different. Employment growth there was better sustained through the late 'sixties so that the unemployment rate continued to fall, reaching its lowest point in 1969. By this time, the Canadian rate was more than a full percentage point higher.

Whether the slow-down which followed 1966 is in some way related to the less-than-desirable growth rate of more recent years, the present inquiry cannot say but clearly there could be factors in common.

To a considerable degree, the post-1966 slow-down was associated with the goods-producing sector. As is shown in Table 7, the growth rate in mining, in manufacturing and in construction fell off sharply. Thus, for the balance of the decade, the economy was depending more on the service-producing sector where growth was better maintained and in two cases (non-commercial services and public administration) undiminished. Much the same pattern has carried over into the 'seventies.

Data in Table 7 substantiate recent claims that, in 1973, the manufacturing industry was again growing strongly. It may also be operating at near capacity, as in 1966. But on this point, the data suggest an important difference between 1966 and 1973 in that expansion in

**TABLE 6. Year-to-year Increases in Employment and Labour Force, 1962 to 1972,
and Annual Average Unemployment Rates**

the latter year follows six years of sluggish growth. This may mean that capacity was reached rather quickly. Latest figures show that construction employment is still far from regaining the momentum of the mid-sixties, so that, by and large, it is still the service-producing industries which show the greatest strength.

Another point of interest is the slackening in non-commercial services, reflecting, in large measure, the

decreased demand for teachers. This was a sector that was reasonably well maintained through the years of slow growth. As a final observation, growth in the government sector has been almost unflagging throughout the period examined and, in the last two years, has topped all industries in terms of percentage increase in employment.

CONCLUSIONS

The apparent illogic of an economy which contains both high unemployment and insufficient labour supply (particularly for the poorest jobs) yields considerably when tackled from the standpoint of labour turnover. If "normal" turnover is increasing – and there are reasons to believe that it is – the amount of "normal" (or "frictional") unemployment will be raised. The list of reasons is quite lengthy and includes such frequently-discussed phenomena as new kinds of people

in the labour force, new attitudes to work and new abilities to quit work or change jobs. But there are also reasons on the demand side, including the deficiencies of the jobs themselves – whether short-term to begin with or dead-end and perceived as such by the worker.

Present levels of unemployment may also be influenced by the fact that the demand for labour in 1973 is not fully comparable with the peak years in the nineteen-sixties.

The selection of the final questionnaire and survey techniques to be used in the revised survey will follow completion of BASIC, the user consultation and research programs and the sample redesign, and leads to the fourth stage of the project, namely, a complete year of parallel operation in the field of both the existing and the revised survey. This parallel operation, scheduled for 1975, is designed to provide the data necessary to develop the linkage procedures required to establish consistent historical series and to enable seasonal adjustment of the series derived from the new survey. Without the linkage procedures developed from the parallel run, it would be impossible to carry out the task of seasonal and historical adjustment.

Early in 1976, following the parallel run, a revision of the historical series from 1975 back is planned. This revision will incorporate a number of changes in addition to those resulting from the revised questionnaire, including any changes resulting from the sample redesign and revision (based on 1971 Census data) of the population estimates which are built into the survey weighting procedure.

The final phase of the Assessment and Revision Project is an increase in the sample size which is scheduled to be introduced as soon as possible after the start of the new survey. The new sample design is being structured in such a way that it will be possible to more than double the sample size in any area. The actual increase for specific areas will be planned in consultation with users prior to the introduction of the larger sample.

Progress to Date

Early in October 1973, the first monthly test survey of the LFSARP was begun. The launching of this survey followed more than a year of intensive preparation, including the detailed planning of overall objectives, the assembling of a project team and the development of strategic plans for the various aspects of the project. In addition, the design and production of a new questionnaire and other documents, the design, detailed specification and installation of an entirely new computer processing system, and the hiring and training of new field staff across Canada had to be completed before the test survey could be started.

The new test survey, known as BASIC, is designed primarily to serve as a vehicle for the development and testing of the new collection and data processing techniques required to support the revised and expanded Labour Force Survey. It also serves as a test of direct-style questioning and of the sorts of new questions which will be included in the revised survey. In fact, the questionnaire used in BASIC is a carefully modified version of the one used in the United States, and, as noted earlier, serves as a "failsafe" version in that it is a proven approach and goes a long way toward meeting many of the requirements of the revised survey. However, the main emphasis of BASIC has been the

development of new field collection and data processing operations, and it is in these areas that most of the first year's work was concentrated.

The first task in developing BASIC was to assess the overall operational requirements of the revised survey from the points of view of timeliness, cost and data quality, keeping in mind the expanded volume of data and more complex tabulations that the new survey would involve. The results of these deliberations led to the design of procedures quite different from those used in the existing survey, including substantial changes in both field operations and data processing. With respect to field operation, for example, the use of new questions and the more direct style of questioning necessitated the development of a complete new package of reference and training materials and provided the opportunity for testing and implementing new methods of interviewer training.

Field operations also have been substantially changed as a result of the introduction of a new and unique computer system for handling the data collected in the survey. In the existing survey, stock questionnaires are completed by interviewers, returned to Statistics Canada Regional Offices and then forwarded to Ottawa for editing, coding and tabulation. The data processing system now in use is rapidly becoming outdated and is not capable of meeting the requirements of the revised survey. The new system which is being developed in BASIC will incorporate almost all facets of the data collection and processing cycle in the survey, from the initial sample selection of households through to the final tabulation of survey data. It utilizes mini-computers located in each regional office, in addition to a mini-computer and the main Statistics Canada computer facility in Ottawa. The system features such techniques as pre-printing of questionnaires and other survey documents with respondent identification and survey control information, Regional Office data entry from completed documents, transmission of data between the Regional Offices and Ottawa using telecommunications lines, and storage of data in a "data base" to facilitate coding, editing and tabulation of survey results. Computerized quality control measures also are built into the system to provide information as quickly as possible on various aspects of survey performance.

Much has been accomplished to date through BASIC in developing the operational capability to handle the full-scale revised survey. However, a great deal remains to be done before the introduction of the new survey, and work is continuing on the improvement and enhancement of the results achieved so far.

User consultation — After work was well underway on the development of BASIC, considerable attention was focused on an extensive program of consultation with data users, with the objective of

determining as precisely as possible the data requirements of the various users of data which could be generated through the Labour Force Survey. For several months during 1973, the consultation took the form of bilateral meetings with major data users, particularly those in federal and provincial government departments, and widespread circulation and exchanges of papers and ideas with as many interested users as possible. These bilateral discussions were followed by a three-day Data Users Conference held in Ottawa in October 1973, involving participants from the federal and provincial governments, the academic community and business and labour organizations, as well as representatives from statistical organizations in the United States and the United Kingdom. The Conference provided an opportunity for an open exchange of ideas among the users and producers of the LFS data, and played a direct and substantial role in the LFSARP by helping Statistics Canada identify the views and preferences of data users with respect to the content of the revised survey. Following the Conference, work was begun on the development of a new questionnaire and related survey documents incorporating many of the ideas discussed in the course of the user consultation program. The new questionnaire will be tested along with BASIC in 1974.

Most of the discussions with data users in 1973 were centred on the regular monthly content of the survey, since it is the monthly questionnaire and associated documents and procedures which require settling first. Further discussions will be held in 1974 on such matters as occasional supplementary surveys, the size of the sample and the extension of the survey to include new areas.

Research — Concurrent with the development of BASIC and the user consultation program, project staff and other research staffs in Statistics Canada have been undertaking a number of specialized studies related to

concepts, content, survey techniques and quality control. Included among the projects are studies related to education data, geographic mobility data, family data, longitudinal data analysis, sub-provincial estimation mechanisms, proxy response, the use of telephone interviewing and definitions of full and part-time work. These and many other research projects are either completed or in progress, and their results will be incorporated in the final design and operation of the revised survey. The development of a continuing research program is one of the important objectives of the LFSARP, and much of the work and experience of the project will provide a sound basis for future research.

Sample redesign — The sample frame of the Labour Force Survey is redesigned after each decennial census to take into account the demographic changes which have taken place in the intercensal period. The current redesign is nearing completion and has involved making provision for an increased sample size and inclusion of areas not now included in the survey, revisions in economic region and strata boundaries, as well as the delineation of new sampling units within these areas. In addition, the sample redesign is incorporating many improvements of a technical nature (for example, new sampling methods) which have been developed in recent years.

A great deal of written information is now available relating to the Assessment and Revision Project. Papers of both a general and technical nature on a wide variety of topics have been prepared by Statistics Canada staff and by a number of authors from the academic community. For further information on these papers or any other matter relating to the LFSARP, interested persons may contact Bruce Petrie, Project Manager, Labour Force Survey Assessment and Revision Project, Statistics Canada, Ottawa, Ontario.

Preliminary Annual 1973

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available on print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 4, Table 3 to Table 5 - Labour Force

The seasonally adjusted series contained in these tables have been revised from January 1953 to the present.

Section 13, Table 11 - Federal Government Budgetary Revenues

Beginning with December 1973 data, the category "other excise taxes" includes oil export tax levied under the Excise Tax Act. More information on this tax can be obtained from the *Canada Gazette*, Statement of Financial Operations for December, 1973 and the first nine months of the Current Fiscal Year; and the Department of Finance press release of February 1, 1974.

The following release dates for two of Statistics Canada key series are printed here as a convenient reference.

Data for the month of	Labour Force Survey	Consumer Price Index

The Labour Force Survey information is available from *The Labour Force*, Catalogue 71-001. Consumer price indexes for Canada are available in *Consumer Price Movements*, Catalogue 62-001. Cities indexes are released in the *Statistics Canada Daily*, Catalogue 11-001.

All these publications may be ordered from Publication Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (613-995-6809).

GNP at market prices rose 14.8 per cent in 1973, compared with 10.7 per cent in 1972. In real terms the rates were 7.1 and 5.8 per cent, respectively.

The year featured a strong opening quarter, two quarters of relatively slow growth, and a sharp rebound in the fourth quarter.

Economic growth was mirrored on the income side by sharp rises in all components but most spectacularly in corporate profits and in farm income.

All quarterly data seasonally adjusted at annual rates.

An increase in the surplus in merchandise trade was somewhat offset by an increase in the deficit in the services account. The deficit on all transactions in goods and services with non-residents declined by \$115 million to a level of \$693 million.

The increase in the deficit in the fourth quarter was entirely due to non-merchandise transactions, mainly increased payments of interest and dividends and rising outlays on travel expenditure abroad.

The pace of spending accelerated in 1973. Consumer expenditures and fixed capital formation posted exceptionally strong gains.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

Fourth Quarter and Preliminary Annual 1973

The strong expansion of the Canadian economy under way since the beginning of 1971 continued in 1973 at an accelerated pace. A 7.1 per cent growth in production was accompanied by an equally rapid rise in prices and by the largest percentage employment gain on record. Since the labour force also registered an increase of record proportion, the rate of unemployment remained high in 1973, although it declined to 5.6 per cent from 6.3 per cent in 1972. As the year progressed, the emergence of an extremely strong rise in unfilled orders and lengthening delivery dates suggests that a number of industries are encountering capacity constraints in plant and equipment and shortages of certain materials and specific labour skills.

Inflation was particularly severe in 1973, especially in the case of basic commodities such as raw materials and food products. The price increases were mostly due to worldwide demand pressures together with supply shortages, particularly in the agricultural sector. The situation was exacerbated in the final quarter of the year by the international energy crisis, which was accompanied by very sharp increases in crude oil prices posted by all producing countries. Although the impact of this major development on the Canadian economy appears to have been small in 1973, the future repercussions on the world economy are a matter of considerable concern.

Gross National Product at market prices rose by \$15.3 billion, or 14.8 per cent, to reach a level of \$118.7 billion. This was the largest percentage gain registered since the early fifties, when expansion was associated with rapidly rising prices during the Korean war period. The 7.1 per cent rise in the overall implicit price index in 1973 was one of the highest on record and compared with a rise of 4.6 per cent in 1972 and of 3.1 per cent in 1971. However, the growth in GNP of 7.1 per cent, in real terms, was well in excess of that experienced in any year since 1966. By comparison, real growth amounted to 5.8 per cent in both 1971 and 1972.

As in the previous two years, consumer outlays, especially on automobiles and other durable goods, and housing construction continued to provide a major impetus to expansion. In 1973, sharp increases in business fixed investment in non-residential structures and in machinery and equipment gave an additional important boost to the economy. The rate of increase of 18 per cent in the latter categories occurred after six years of relatively low outlays. There are indications that the fast pace of business fixed investment in plant and equipment will continue in 1974. On the other hand, the rate of inventory investment for the year as a whole showed only a modest increase. The external sector continued to display buoyancy, with both exports and

imports of goods and services posting large gains. Economic growth was mirrored on the income side by sharp rises in all components but most spectacularly in corporation profits and in farm income.

Within the year, the pace of activity was uneven. There was widespread demand strength in the opening quarter, which showed a 2.7 per cent rise in real growth on the heels of an exceptionally strong 2.9 per cent rise in the closing quarter of 1972. This initial burst of activity, which put the economy at a much higher level than the average performance in 1972, was followed by two quarters of relatively slow growth, partly due to developing supply constraints and to the disruptive effects of a railway strike and other labour disputes in the third quarter. The sharp rebound in the fourth quarter, which showed a 2.8 per cent increase in real growth, was general, including a substantial buildup of non-farm inventories at wholesale and retail trade levels, apparently related to the resumption of rail shipments following the strike.

Consumer Outlays

In line with very strong increases in personal disposable income and in consumer credit outstanding, consumer outlays on goods and services registered an unusually large gain for the second consecutive year. Personal expenditure rose \$8.8 billion, or 14.6 per cent and accounted for almost 58 per cent of the rise in GNP. In real terms, the rise of 8.6 per cent, which compared with rises of 7.8 per cent and of 5.5 per cent in 1972 and in 1971 respectively, was much higher than any recorded since 1955. Growth in consumer spending outpaced the rise in personal disposable income, resulting in a small decline in the saving ratio (personal saving as a proportion of personal disposable income) from 7.7 per cent in 1972 to 7.4 per cent in 1973. This ratio, however, remained very high by historical standards.

The 20 per cent increase in personal expenditure on durable goods was very broadly based. About one-third of the \$1.8 billion increase consisted of expenditures on new automobiles. The overall strength of the previous two years continued into the first quarter of 1973, which accelerated sharply from 10 per cent growth in the fourth quarter of 1972 to 18 per cent in the first quarter of 1973 and then gradually declined over the rest of the year. Expenditure on durable goods other than automobiles rose by 21 per cent. In particular, there were strong gains in outlays on furniture and home appliances, reflecting the concurrent boom in the housing sector. A modest 1.5 per cent rate of price increase for the durable goods category as a whole resulted in a volume gain of 18.4 per cent compared with 14.2 per cent in the previous year.

Expenditure on semi-durable goods and on non-durable goods also rose at unusually strong rates, the former by 15.6 per cent and the latter by 16.3 per cent. Here, however, much of these gains consisted of higher prices, especially in non-durable goods, where a price rise of almost 10 per cent was registered, largely centered in the prices of food and fuels. In volume terms, outlays on semi-durables rose by 9.9 per cent and on non-durables by 5.8 per cent. In semi-durables, there were very strong gains in outlays on clothing and footwear. Expenditure on services showed some acceleration, from 9.7 per cent in 1972 to 10.7 per cent in 1973.

Investment

All components of gross fixed capital formation displayed strength in 1973. The housing sector, contrary to earlier expectations, registered a strong gain of 21 per cent after sharp rises in 1971 and 1972. Even in volume terms, the gain of about 11 per cent was considerable. Housing starts rose by more than 7 per cent to reach a record level of 269,000 units. As in the previous year, the rise was concentrated in starts of single detached dwellings.

Business fixed investment in plant and equipment rose by 18 per cent in value terms and by almost 12 per cent in terms of volume. Both non-residential construction and machinery and equipment spending rose at accelerated rates, but especially the latter, which was up by 21 per cent. Rises in machinery and equipment spending were widespread but especially notable in outlays in the manufacturing and utilities industries and on farm machinery and business vehicles.

Investment in non-farm business inventories rose by only \$143 million to a level of \$907 million. The accumulation was almost equally distributed among the three major industry groups, manufacturing, wholesale trade and retail trade. Within manufacturing, stocks of durable goods-producing industries showed substantial accumulations while stocks of non-durable goods-producing industries were liquidated for the second consecutive year. However, this was offset at the trade level, where the reverse pattern was observed — increases in stocks of non-durable goods and declines in the stocks of durable goods. The stocks-to-shipments ratio continued the pronounced decline begun in 1971. Stocks of farm inventories declined in the year, reflecting strong world demand and an only moderate increase in production.

The External Sector

The pace of activity in the external sector quickened markedly in 1973. The value of merchandise exports rose by 24.6 per cent compared with a rise of 11.9 per cent in 1972. The most notable gains occurred in exports of lumber, crude petroleum, wood pulp and automobiles. All of the acceleration (with the exception of automobiles and parts) was due to sharp increases in prices of certain basic commodities. With a price increase of 16.5 per cent, the rate of growth of merchandise

exports in volume terms actually decelerated somewhat from 8.8 per cent in 1972 to 6.9 per cent. The value of merchandise imports rose at about the same rate as merchandise exports. However, since the price increase of 9.6 per cent was much smaller than that shown by exports, there was a substantial increase in volume terms of about 14 per cent. Particularly strong increases were recorded in imports of machinery and equipment, in line with rising investment outlays, and of automobiles and parts.

An increase of \$349 million in the surplus in merchandise trade was somewhat offset by an increase in the deficit in the services account, partly due to increased travel payments and larger outflows of interest and dividends. The deficit on all transactions in goods and services with non-residents declined by \$115 million to a level of \$693 million.

Incomes

Economic expansion was reflected on the income side by extensive gains in almost all components. Labour income (comprising over one-half of GNP) rose by more than 12 per cent, corporation profits rose by about 37 per cent, and accrued farm income rose by 83 per cent. The astounding rise in farm income reflected sharply rising prices in international grain markets.

The acceleration in labour income (the rate of increase in 1972 was 10.7 per cent) resulted from gains in employment, and from a rise in average earnings similar to that experienced in the previous year. Wages and salaries rose at similar rates in the goods-producing and the service-producing industries. The gain in the goods-producing industries of 11.8 per cent compares with an increase of 8.3 per cent in the previous year. Within the goods-producing industries, wages and salaries in manufacturing, up 12.9 per cent, posted their largest gain in many years. Within the service-producing industries, there were higher wages and salaries in trade and in finance, insurance and real estate, in line with significant employment increases in these industries.

The rise of 36.9 per cent in the preliminary estimate of corporation profits represented a sharp acceleration after very large gains of 16.2 per cent in 1971 and 20.6 per cent in 1972. Since 1971, this component has been rising faster than total income generated and now represents 12.5 per cent of GNP, the largest proportion since 1952. Although almost all industries had profit increases, especially strong growth was recorded in manufacturing and mining. Within manufacturing, particularly large gains were recorded in textiles, wood, paper and allied industries, primary metals, metal fabricating, non-metallic minerals and refined petroleum products. All mining groups — base metal mining, oil and gas mining and other mining — increased substantially.

As in the previous year, a significant part of the rise in corporation profits and in non-farm unincorporated business income was due to inventory gains resulting from the turnover of goods at rising prices. The inventory valuation adjustment, intended to remove from income these profits which do not reflect current production, rose by over a billion dollars in 1973.

Price Movements

Strong inflationary tendencies in 1973 translated into a 7.1 per cent rise in the implicit price index for GNP. This index, however, reflects changes both in prices and in the composition of expenditure. Available base-weighted price measures also displayed extraordinarily large increases. The consumer price index rose by 7.6 per cent while the index of industry selling prices increased by 11.9 per cent.

Although the implicit price indexes of most components of expenditure rose at accelerated rates, price movements in the external sector were the dominant factor in the overall change of 7.1 per cent. The explosion in world prices for food, raw materials and metals was reflected in a 14.8 per cent increase in the implicit price index for exports of goods and services. Prices for crude vegetable products rose by almost 100 per cent, for wheat by almost 55 per cent, for lumber and copper by almost 40 per cent, for crude petroleum by 35 per cent and for zinc by about 28 per cent. The export price rise for manufactured goods on the other hand rose by a moderate 1.7 per cent. Stable motor vehicle prices served to dampen the price rise in this group.

The implicit price index for imports rose by 9.1 per cent compared with the 2.6 per cent rise in 1972. The 4.2 per cent price increase of manufactured goods resulted largely from a 4.6 per cent rise in the prices of motor vehicles and a 6.8 per cent rise in prices of machinery and equipment.

The movement in the implicit price index for personal expenditure was mainly influenced by the near-doubling in the rate of increase in the index for non-durable goods, from 5.0 per cent in 1972 to 9.9 per cent in 1973. Within non-durables, food prices rose by 15 per cent; there were also sizable increases in the prices of electricity, heating fuel, and gasoline. Prices of semi-durable goods accelerated, with particularly strong advances in prices of footwear and jewellery. Prices of durable goods, on the other hand, rose by a moderate 1.5 per cent. In the services category, which showed a price acceleration from 3.9 per cent in 1972 to 4.6 per cent, notable increases were recorded in the prices of insurance and restaurant meals.

Business gross fixed capital formation prices rose 6.6 per cent during the year relative to a 5.1 per cent advance in the previous year. Construction and machinery and equipment prices both accelerated, but the

construction price increases were much stronger. Residential construction prices were up 8.8 per cent, non-residential construction prices rose 7.8 per cent, while machinery and equipment prices advanced a more moderate 4.7 per cent. Rapidly advancing material prices contributed most to the construction price boost. While almost all materials components rose strongly, the advance was led by the exceptional upward thrust of the prices of lumber and related wood products.

The Government Sector

Total revenues of all levels of government combined (excluding inter-governmental transfers) rose by 14 per cent in 1973, the largest rate of increase in several years, reflecting the continued strong growth in the economy. All revenue categories registered gains. There were sharp increases in returns from both personal direct taxes and corporate direct taxes with much of the gain taking place at the federal government level. A large part of the higher returns from indirect taxes occurred in federal and provincial sales taxes.

The rate of increase in total expenditures was somewhat lower than in recent years, about 12.5 per cent. Over half of the rise was in purchases of goods and services where higher wage and salary payments dominated. By level of government, much of the increase took place at the provincial and local levels. The increase in transfer payments to persons was much lower in 1973 than in the previous two years which were affected by major legislative changes. Most of the increase in 1973 was at the federal level and reflected increases in the Old Age Security pension rates and family allowance rates as well as higher unemployment insurance benefit payments.

With revenues rising more sharply than expenditures, the deficit of the government sector, on a National Accounts basis, narrowed from \$634 million in 1972 to \$161 million in 1973. The federal government deficit narrowed from \$701 million to \$14 million while the provincial government deficit also narrowed, from \$632 million to \$411 million. Partially offsetting these movements was a widening in the local government deficit from \$755 million to \$1,215 million. The surplus of the Canada and Quebec Pension Plans rose somewhat.

Gross National Product — Fourth Quarter 1973

Following six months of moderate growth, economic activity in the fourth quarter of 1973 returned to the strong rate of advance recorded in the first quarter. Preliminary estimates indicate that Gross National Product, seasonally adjusted at annual rates, rose to \$125.2 billion, a 4.2 per cent increase from the third quarter. After discounting the effect of continued price pressure, the growth in real terms amounted to 2.8 per cent, about the same rate as in the first quarter, but considerably larger than the gains of less than 1 per cent in the intervening two periods.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

¹ The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ² The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, non commercial services, plywood households, public administration and defence. Sources: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below.²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				ratio of inventories owned to shipments

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories¹ by industry based on the 1960 standard industrial classification (million dollars)

annual average and month	total inventories owned	non- durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". ¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.

²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities.

³Includes appliances and utensils.

⁴Excluding shipments for re-processing of maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last current year are not so adjusted.

²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Source: Retail Trade (63-005), Statistics Canada.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500. usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11.²The annual index, being calculated separately, will differ slightly from the index obtained by theaverage of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap.⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973 only 6 major railways (accounting for 95% or more of the total operating revenues) are shown. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and same private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares. Source: Bank of Canada Review.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, Statistics Canada.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Introduction

This issue presents a new feature — **OBSERVATIONS**. In this space, it is planned to present short items of interest to our readers on recent developments in Statistics Canada and in areas relating to the bureau's many activities. Comments from subscribers on the items used and on the kinds of material you would like to see in this section are invited. Please direct your comments to the individuals named at the end of each article or to Mary Norman, Editor, *Canadian Statistical Review*, Current Economic Analysis Division, Statistics Canada, Room 3164, Statistics Canada Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0Z8 (613-995-7406).

Multinational Enterprises Section

Statistics Canada's new section, Multinational Enterprises, began operation in September 1973. The unit has been charged initially with recommending an optimal future set of statistics relating to the operations of foreign direct investment firms in Canada. Thus, at present at least, the name Multinational Enterprises is a bit of a misnomer since it is only future directives which will lead the section into consideration of multinational enterprises as more properly but variously defined.

Since September, the small unit of three has pursued a developmental and co-ordination role toward evolving a suggested optimal set of statistics which would be produced in various divisions of Statistics Canada, but not necessarily, or even probably, within the Multinational Enterprises Section itself.

At this time, the unit is developing an analytical framework into which the principal policy and theoretical issues of foreign direct investment may be placed as a basis for specific recommendations on the requisite statistics. The final recommendations will, of necessity, take into consideration other Statistics Canada needs, such as the continuity and value of existing statistical series. Simultaneously, the recommendations will be based on an assessment of the possibility of co-ordinating existing Statistics Canada activities so as to minimize duplication of data collection (the burden on the respondent) and making existing series consistent so as to maximize the utility to Statistics Canada's many users of the statistics finally produced. In fact, the co-ordination role in the above sense is the single most important role of the new unit which will serve as a focal point for such rationalization activities.

The Multinational Enterprises Section is also now undertaking a pilot project involving the study of a large industrial complex. The project will identify the many types of information which are being picked up in Statistics Canada at this moment and which could

conceivably be integrated and further mined as a primary source of information for future statistical series on the aspects of foreign direct investment firms. Specifically, this pilot project is an attempt to tabulate the vast range of data, the levels at which the data is now collected and the coverage and frequency of various surveys and censuses in order to compare and integrate current surveys with recommendations for further development of statistical series on a foreign- versus domestically-controlled basis.

A related aspect of the unit's work is the development of an objective, clearly measurable definition of foreign control as applied to a company or enterprise (complex). The definition will be tested for feasibility, consistency, and comparability vis-à-vis definitions of foreign control now used within Statistics Canada and elsewhere. The object here is to evolve a definition of foreign control which can be readily employed consistently throughout Statistics Canada as the basis for dividing existing key statistical series into foreign and non-foreign control groups as well as for producing new statistical series.

Additionally, the unit is undertaking several small pilot projects which relate to the development of statistics in the area of foreign direct investment and which may constitute the basis for small, special research projects. In this regard, the Multinational Enterprises Section plans to identify specific areas for future research and analysis once the statistical series become available, or on the basis of limited special data.

Queries about the new Multinational Enterprises Section may be directed to its Chief, Mrs. E.P. Bond, Room 1411, Statistics Canada Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0Z8 (613-995-0024).

Federal/Provincial Conference on Tourism

Statistics Canada participated at the 28th Federal/Provincial Conference on Tourism held in Charlottetown, Prince Edward Island on November 5-7, 1973. Three statistical priorities were tabled at the Conference recommending the development or strengthening of the following areas.

1. A major in-depth international exit survey, including visitors by both air and surface transportation.
2. Development of a survey to produce annual domestic travel statistics.
3. Improvement of regular annual international travel statistics.

Both the Travel, Tourism and Recreation Section and the International Travel Section of Statistics Canada will be giving careful consideration to these priorities in the development of their future programs.

OBSERVATIONS

Other topics discussed at the Conference relating to tourism and travel statistics included employment data in the accommodation, food and recreation services, travel industry indicators, international travel statistics in 1972 and early 1973, and travel, tourism and outdoor recreation statistics.

Readers wanting more information on this topic are invited to contact Mr. M. Valiquette, Chief, International Travel Section, Financial Flows and Multinational Enterprises Division, Statistics Canada, Room 3141, Statistics Canada Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0Z8 (613-992-5507).

Judicial Division Expands Crime Reporting Program

Recognizing the need for more detailed operational statistics on reported crime in Canada, Statistics Canada, in consultation with the Uniform Crime Reporting Committee of the Canadian Association of Chiefs of Police, has decided to expand the present U.C.R. program, beginning in 1974.

Many types of crime are included in the expanded program. For example, arson statistics will now be reported to Statistics Canada by the various police departments instead of by Provincial Fire Marshals. This change will enable the Judicial Division to supply comparable statistics for more detailed geographic areas.

For illegal drug cases, the 1973 revised drug reporting arrangements will continue. Using these procedures, the police department investigating and/or laying a charge in connection with a drug offence will report that offence directly to Statistics Canada.

Some of the other areas involved in the new uniform crime reporting program are offences by juveniles, homicides and assault of a police officer.

Details of this program are available from the service bulletin Law Enforcement, Judicial and Correctional Statistics, Volume 1, Number 3, October 1973. Catalogue 85-001, Statistics Canada.

Queries about the program may be directed to Mr. M. Mallette, Project Manager, Uniform Crime Reporting Program, Judicial Division, Statistics Canada, Room H 404, No. 8 Temporary Bldg., Carling Avenue, Ottawa, Ontario, K1A 0Z5 (613-994-5553).

Report on Low Income Families

In 1969, 17.4 per cent of Canadian families were classified as low income families. The characteristics of

these families, and of the 35.7 per cent of the unattached individuals who were also in the low income category, are presented in *Statistics on Low Income in Canada, 1969*.

In addition to data on assets, consumer debt, age, work experience, area of residence, etc., analyses of the data are included. Information on other families is presented for comparison.

Statistics on Low Income in Canada, 1969, Catalogue 13-553 was produced by the Consumer Income and Expenditure Division, Statistics Canada, and is available for \$1.00 from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6, or from Information Canada, Ottawa, and Information Canada bookstores throughout Canada.

Questions arising from material presented in the publication may be directed to R. Love, Research and Analysis Section, Consumer Income and Expenditure Division, Statistics Canada, Room 1724, General Purpose Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (613-996-0990).

R & D Expenditures

The Science Statistics Section of Statistics Canada has produced the first in a series of reports on expenditures on research and experimental development in Canada.

Although Statistics Canada has collected and published information on R & D for many years, such data have been incorporated in other reports and have not been directly comparable between sectors. In this February 1974 report, which covers expenditure on R & D in the natural sciences and technology for the period 1963 to 1971, reconciliation between various series has been accomplished and comparisons are possible.

Research and Development Expenditures in Canada, 1963-1971, Catalogue 13-403, Biennial, is available for \$.50 from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6 or from Information Canada, Ottawa and Information Canada bookstores throughout Canada.

Readers are invited to contact Miss L. Lynch and Mrs. M. Murphy, Science Statistics Section, Education Science and Culture Division, Statistics Canada, Room B157, No. 5 Temporary Bldg., Ottawa, Ontario, K1A 0Z5 (613-994-9785).

Strength of demand was pervasive in the quarter. Most major components showed accelerated rises in both value and volume terms. Consumer expenditure rose by 4.4 per cent. In the capital sector, both residential construction and business investment in plant and equipment posted strong gains over the third quarter estimates. Merchandise transactions with non-residents, which had been sharply curtailed in the previous quarter, mostly because of the rail strike, bounced back spectacularly in the fourth quarter. There was also a strong accumulation in non-farm inventories.

Consumer Outlays

Increases in consumer outlays on goods were widespread. Within durables, expenditure on automobiles declined for the third consecutive quarter; spending on other durable goods increased sharply. Outlays for semi-durable and non-durable goods rose moderately. Among non-durables, increases in food and heating fuel expenditures largely reflected price rises. Expenditure on services rose, mostly due to a surge in tourist expenditures abroad.

Investment

In fixed capital, outlays on housing rose by 5.3 per cent. All types of dwellings showed increases, with single detached units accounting for more than half of total spending. A substantial part of the increased investment in housing reflects a carry-over from work begun earlier in the year as the number of starts in the fourth quarter declined for the second consecutive quarter. Business expenditure on plant and equipment continued to rise, by 6.3 per cent. Prices pared away much of the increase, so that the real growth rate was only 3.4 per cent compared with 4.8 per cent in the third quarter.

A feature of the quarter was a \$1.4 billion accumulation in non-farm business inventories, mainly in wholesale and retail trade. Among the factors affecting the behavior of trade inventories this quarter were shortages of some building materials and a pile-up of others, and a shift of materials held in transit during the third quarter rail strike from manufacturers to wholesale dealers.

Within manufacturing, stocks of durable goods-producing industries accumulated substantially, but were entirely offset by a liquidation in the stocks of non-durable goods-producing industries. By stage of production, stocks of both raw materials and goods-in-process increased sharply while stocks of finished goods rose moderately. With new orders running ahead of shipments and production, the quarter ended with a sharp increase in the backlog of unfilled orders.

The External Sector

Merchandise exports rose very strongly in the quarter, mainly due to exceptional price rises. The increase was 11.5 per cent in value terms, but only 3.1 per cent in volume. Export price increases were espe-

cially notable in crude petroleum (where the export tax introduced in October was a factor), wheat, wood pulp and newsprint. Merchandise imports, where price increases were much less important, rose by 11.3 per cent in value, and by 7.9 per cent in volume. Among merchandise imports, strong gains were registered in automotive products, industrial machinery, apparel and footwear.

An increase in the merchandise surplus of \$228 million was more than offset by an \$864 million increase in the deficit in non-merchandise transactions. The larger deficit was mainly attributable to increased payments of interest and dividends and to rising outlays on travel expenditure abroad. Thus, the overall deficit on transactions in goods and services rose in the fourth quarter by \$636 million, to a level of \$1,252 million.

Incomes

Highlighting the income side were a 13.5 per cent jump in corporation profits and a 4.1 per cent increase in labour income. Preliminary estimates indicate that gains in corporation profits were wide-ranging. Within the manufacturing industries, paper, primary metals, metal fabricating, transportation equipment and chemicals appear to have recorded the largest gains. All mining industries showed substantial increases, with oil and gas mining leading the way. Profits in transportation, communication and utilities also grew strongly.

The increase in labour income followed the modest 1.6 per cent advance of the third quarter, when labour disputes, particularly in the pulp and paper industries and in transportation, slowed the rate of growth considerably. In the fourth quarter, the most notable gains in wages and salaries occurred in manufacturing, up 5.0 per cent; in transportation, communications and other utilities, up 6.7 per cent; and in trade, up 4.3 per cent.

Price Movements

Although most categories of expenditure continued to show strong price increases in the fourth quarter, weight shifts between inventories and other components of expenditure had the effect of slowing the rate of advance of the overall implicit price index from a rise of 2.6 per cent in the third quarter to 1.4 per cent in the fourth. Excluding inventories, the implicit price index accelerated from 2.4 per cent to 2.9 per cent.

Prices for personal expenditure on consumer goods and services rose by 2.2 per cent — about the same rate as in the preceding quarter. A slowdown in the rate of price increase for durable goods was offset by continued strong price advances for non-durable goods and some speed-up in price rises in semi-durable goods and in services. Within non-durable goods, food price increases continued to dominate, rising by 4.3 per cent, after an increase of 5.8 per cent in the third quarter. Heating fuel and gasoline prices rose abruptly.

Business gross fixed capital formation prices rose by 2.6 per cent, following 0.9 per cent in the third quarter. While both material and labour prices in construction were up, there was a more rapid price rise in the materials component.

At 7.5 per cent, the rise in export prices was the largest on record. The merchandise component was primarily responsible for the price acceleration, and this in turn stemmed mainly from wheat prices, up over 60 per cent; crude petroleum prices, up over 30 per cent; wood pulp prices, up 10 per cent; copper prices, up 14 per cent; and zinc prices, up 10 per cent.

The rise of 3.2 per cent in the implicit price index for imports was of the same magnitude as the rises in the previous three quarters. Price acceleration in raw and fabricated materials was centered in textiles, crude petroleum, and iron and steel products. Sharp price increases for many components in the food group were largely offset by declines in the prices of vegetables, fodder and feed. Prices of finished products remained stable with the exception of the price of farm machinery, which rose 4.6 per cent.

The Government Sector

Total expenditure of all levels of government combined, seasonally adjusted at annual rates and excluding inter-governmental transfers, rose by 2.9 per cent in the fourth quarter. Spending on current goods and services increased by 3.4 per cent, with more than half of the gain at the federal level. Transfer payments to persons increased by 3.1 per cent. This increase is largely attributable to the new family allowance rates introduced in the fourth quarter.

Total revenues in the same period increased sharply by just over 7 per cent. Personal direct taxes increased by 7.9 per cent, direct taxes from corporations and government business enterprises increased by 15.7 per cent and indirect taxes increased by 5.6 per cent, due in part to the export tax on gasoline imposed in the fourth quarter.

As a result of revenues rising more rapidly than expenditures, the government sector, on a National Accounts basis and seasonally adjusted at annual rates, moved from a deficit of \$928 million in the third quarter to a surplus of \$860 million in the fourth quarter.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available on print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 6, Table 10 – Raw Hides, Skins and Finished Leather

The series "sheep and lamb leather" (D 2160) has been deleted with this issue at the request of the source. Also, the series is terminated in CANSIM.

Section 7, Table 4 – Supply and Disposition of Crude Oil and Natural Gas.

Crude oil statistics (D 2505 to D 2509) have been revised from January, 1949 to the present and natural gas statistics (D 2510 to D 2517) have been revised from January, 1952 to the present.

Section 13, Table 9 – Stock Exchange Statistics

On January 1, 1974, the Montreal Stock Exchange and the Canadian Stock Exchange joined under the name, Montreal Stock Exchange. Following this merger, statistics on volume of shares traded are no longer available for the categories "industrials" and "mining and oils" on the same basis as previously reported in the *Canadian Statistical Review*. Therefore, these series are terminated in CANSIM as well as in the Review. However, statistics on total volume of shares traded and value of shares traded are compatible with previous series published in the CSR.

RECONCILIATION OF INTERNATIONAL TRADE STATISTICS

J. Brian Salley*

Canadian and United States trade statisticians decided in 1971 to attempt a thorough reconciliation of their statistics on merchandise trade between the two countries. The most urgent reason was that the differences between the two countries' reports of their bilateral trade balance assumed special importance in 1971 when the United States was experiencing severe strains on its balance of payments. Discussions between U.S. and Canadian trade policy officials were complicated by the fact that their statistical agencies measured the trade balance with different results. Table 1 compares the reports of the trade balance published by the two statistical agencies and illustrates the increased significance of the discrepancy in recent years.

magnitude exceeding the residual error of estimate of the two measures of GNP for that year. The implications of reconciliation for Canada's figures have proved fortunately to be much less important than this.

More generally, statisticians continually seek ways of checking the accuracy of the data which they produce. The case of statistics on international trade is one of the few in which each event is measured by two independent statistical agencies in that both the External Trade Division of Statistics Canada and the Foreign Trade Division of the United States Census Bureau conduct a complete monthly census of transactions based on Customs administrative documents. It might be

TABLE 1. Trade Balance Between Canada and the United States, 1960 to 1973

Year	Reported by Canada ¹	Reported by United States ²	Total trade ³
millions of U.S. dollars

1973	+ 590 ^P	+ 2,375 ^P	32,536

¹ Data from Statistics Canada's External Trade Division.

² Data from Foreign Trade Division, United States Bureau of the Census. (Sign reversed.)

³ U.S. exports plus U.S. imports, shown for comparison purposes.

Since each country's published import figure consistently exceeds the other's published export figure, these discrepancies are additive in the reported balance. Thus, in 1972, the discrepancy between the two reports for the southward flow was \$851 million, for the northward flow \$627 million, but for the balance, the discrepancy was \$1,478 million, the sum of the two.

There is another important reason for seeking to explain discrepancies in trade statistics. For example, if in 1972, the United States measure of Canada's trade surplus had been correct, Canada's measure would have included an error of \$1.5 billion dollars, which in the framework of the national accounts would have represented 1.4 per cent of gross national expenditure, a

expected therefore that differences in their statistics should reflect only incompatibilities between their concepts and definitions. The detailed reconciliation has identified the quantitative effects of conceptual differences as well as of systematic errors in the transcription of information from Customs documents. It therefore has become an invaluable tool for quality control.

Finally, there is considerable interest in micro-economic data on trade, particularly for market research or government policy analysis. Conflicts between U.S. and Canadian statistics for particular commodity flows quite properly raise questions about the reliability of the data as a basis for policy or investment decisions. Moreover, the study has revealed that reconciliation of the trade aggregates can be relied upon only if it is based on the identification and measurement of discrepancies for individual commodity flows.

* Mr. Salley is Assistant Director for Reconciliation Programs in the External Trade Division of Statistics Canada.

So far, the bilateral reconciliation has been carried out as a *post facto* accounting study using a variety of techniques to identify the reasons for discrepancies. In November 1973, reconciled statistics for the years 1970 through 1972 were published.¹ Table 2 summarizes the results. While a similar accounting process will be applied to 1973 data, a more ambitious objective has now been adopted. This is to develop techniques which would permit each country to apply adjustments to its own published figures on a quarterly or even monthly basis to

in trade statistics, therefore, can be an obstacle to analysis of developments in the international monetary system. The interest of the International Monetary Fund in this question is attested by the comparison of counterpart trade reports contained in the Fund's most recent *Direction of Trade Annual*.² From a national viewpoint, the identification of errors or inconsistencies in trade statistics may improve the measurement of the balance of payments and GNP, since trade is a growing component of GNP in the world as a whole.

**TABLE 2. Reconciliation of the Measures of the Trade Balance
Between the United States and Canada in 1970, 1971 and 1972**

Year	Direction of flow	Figures published by		Reconciled figures
		Canada	United States	
		millions of U.S. dollars		
1970	Northward	9,486	9,084	9,148
	Southward	10,522	11,092	10,572
	Canadian surplus	1,036	2,008	1,424
1971	Northward	10,841	10,365	10,567
	Southward	11,913	12,691	12,017
	Canadian surplus	1,072	2,326	1,450
1972	Northward	13,042	12,415	12,637
	Southward	14,056	14,907	14,185
	Canadian surplus	1,014	2,492	1,548

estimate "reconciled" figures independently. In addition to the obvious advantages of timeliness, accurate estimating techniques would make it possible for each country to obtain export data by making suitable adjustments to the other country's import data; this could relieve exporters and Customs officials in both countries from part of their paperwork burden. Before this goal can be realized, each agency must be satisfied that it is possible to transform the other's import data into its own export data with a minimum of error.

Discrepancies in International Trade Statistics

The reasons which led Canada and the United States to reconcile their bilateral trade statistics are generally appropriate for conducting similar studies for other pairs of trading partners. Inconsistencies between counterpart trade statistics create both policy and research problems in the realm of international trade and finance. Trade is a very important component of most countries' international transactions, and discrepancies

International negotiations on tariffs and other trade barriers require trade statistics for very narrowly defined commodities. For such negotiations, statistical discrepancies are compounded by inconsistencies in commodity classification. Market research by private enterprises and export promotion agencies is similarly hindered by the problem of relating export to import data for particular commodities. For example, attempts to separate a change in exports into a foreign demand component and a supply (competitiveness) component require consistency between country-commodity export and import sub-totals.

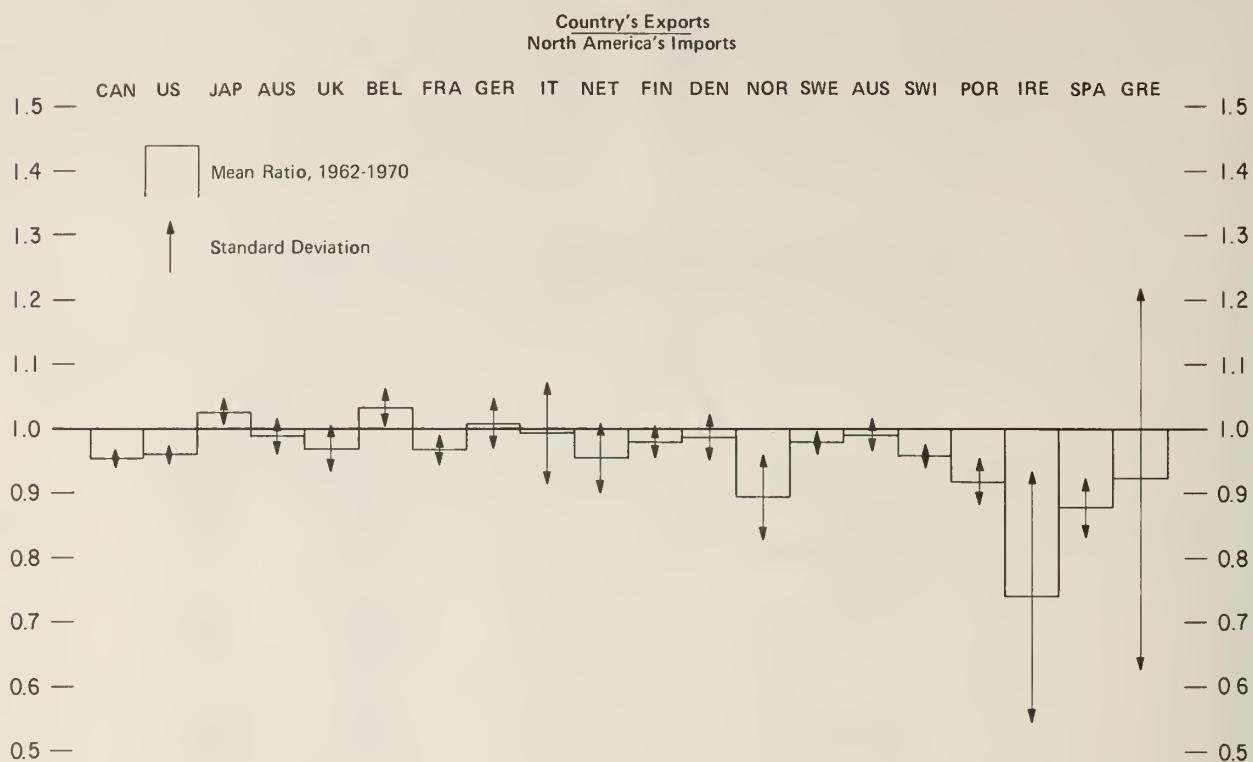

Table 3 and Chart 1 represent attempts to summarize the magnitude of these problems in trade statistics for 20 selected countries. Table 3 is a matrix of ratios of export to counterpart import reports. Two observations should be made from this table. The first is that, on average, import figures exceed export figures (by 3 per cent) as expected, because all the countries shown, except Canada, the U.S. and Australia, include inter-

¹ Copies of the two reports of the U.S.-Canada Trade Statistics Committee on the methods and results of the bilateral research program may be obtained from the External Trade Division, Statistics Canada.

national transportation costs in their import statistics. Although the treatment of transportation costs was not a serious problem in the bilateral Canada-U.S. study, it would be an important complication in any wider analysis. The second point is that the column mean for the Netherlands (that is, the average ratio of partner

conducted from raw national data files at considerable expense. Problems of data processing systems compatibility experienced by the two countries would obviously be compounded by the involvement of other countries. However, the U.N. Statistical Office maintains a bank of international trade statistics expressed both in United

exports to Netherlands imports) is by far the largest, reflecting the function of seaports in the Netherlands as distribution centres for much of Western Europe. The problem of faulty identification of the country of destination is also more important in a multilateral framework than it was in the Canada-U.S. study.

Chart 1 gives more detail of export/import ratios for the United States and Canada combined, and illustrates both the variability of these ratios and, in some cases, their instability over time. It shows that the import figures of Canada and the U.S. are much more consistent with partner reports than their export figures. It also demonstrates that the discrepancies between bilateral Canada-United States trade figures are relatively small compared with those for North American exports to overseas countries.

The apparently serious problem of identifying the destination of exports is a compelling reason in itself for conducting a single multilateral reconciliation study rather than a series of bilateral ones. An equally important reason is the need, if comparisons are to be made, for standardizing national trade data to the greatest possible extent with regard to currency values, commodity classification and conceptual framework. For the Canada-U.S. study, this standardization was

States currency and in the Standard International Trade Classification, Revised. A multilateral reconciliation study could provide useful and quantitative information about the difficulties experienced by reporting countries in using this commodity classification as well as the conceptual framework endorsed by the U.N. Statistical Commission.³

The Role of Standards in Reconciliation

Because United States and Canadian trade statistics are compiled according to different concepts and definitions, for both legal and practical reasons, it was necessary in the bilateral study to adopt a single standard. The standard adopted, which generally follows balance of payments accounting principles, is described in the Committee's report of January 4, 1973 (see footnote 1).

In the Canada-U.S. context, standards for valuation and coverage were found to be particularly important. Between one-third and one-half of each bilateral

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1 Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes.

⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification - continued

year and month		durable manufacturing															
		primary metal industries					metal fabricating (ex mach. & transportation equipment)										
							metal fabricating (ex mach. & transportation equipment)						transp. equipment				
		total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing & coating products	wire & wire products	hardware, tool & cutlery	machinery (except electrical)	total	aircraft and parts	motor vehicles ¹

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included.

²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total.

³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹ The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ² In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 an home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month		inventory at end of month								ratio of inventories owned to shipments	
		shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				
							total	raw materials	goods in process		finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories¹ by industry based on the 1960 standard industrial classification (million dollars)

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports.

⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Form Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage.
⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

Table 4: merchandise imports, by commodity, based on the standard commodity classification¹ (million dollars)

¹Column numbers refer to tables 3 and 4, section 11.²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973 only 6 major railways (accounting for 95% or more of the total operating revenues) are shown. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares. Source: Bank of Canada Review.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. OBSERVATIONS

Help Wanted Index

Responsibility for calculating and publishing the Help Wanted Index was transferred from the Department of Finance to Statistics Canada beginning with the first quarter of 1974. The quarterly index is based on a measurement of help wanted advertising contained in the daily newspapers of 18 metropolitan centres. The information is gathered at the same time as the Labour Force Survey.

The index is a supplemental economic indicator of labour demand. It is usually related to the unemployment rate as the two indicators normally move in an inverse relationship. The Help Wanted Index also can be employed as a companion series to the Job Vacancy Survey in the sense that it is another — although limited — measure of unfilled demand for labour. The main advantage of the index is that, historically, data are available from 1962 while JVS series commenced in 1970. Furthermore, the index is somewhat more timely than JVS data, being available several weeks earlier.

The index, compared with JVS data, has certain limitations. It has partial coverage only, in that not all jobs are advertised in newspapers and there could be more than one job vacancy in a particular advertisement. In addition, the index has no occupational or industrial dimension — only geographic, with indexes available for each of the five economic regions.

The first quarter 1974 Help Wanted Index was released in the Statistics Canada *Daily* in mid-April, 1974.

More information on this topic is available from G. Fincham, Labour Division, Statistics Canada, Room 732, General Purpose Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0V1 (613-992-7461).

Regional Advisors

The Statistics Canada User Advisory Services Division has officers across Canada. Their titles, Regional Advisors, Data Access and Use, reflect the dual-purpose nature of their roles. In addition to giving information about what data is available from Statistics Canada, these officers also provide the public with advice on how to use the data. The following list gives the names and addresses of these advisors.

Mr. Gary Brenton,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
P.O. Box 8556,
3rd. Floor, Viking Building,
Crosbie Road,
ST. JOHN'S, NEWFOUNDLAND.
(Tel.: 709-726-0713)

Mr. Dennis Maloney,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
Sir John Thompson Building,
1256 Barrington Street,
HALIFAX, NOVA SCOTIA.
(Tel.: 902-426-3110)

Mr. J. Paul Légaré,
Regional Advisor, Data Access and Use,
and
Mr. Gerard Filion,
Regional Advisor, Data Access and Use,
User Advisory Services
Statistics Canada,
1500 Atwater Avenue,
14th Floor, Alexis Nihon Plaza,
MONTREAL 216, QUEBEC.
(Tel.: 514-283-5724)

Mr. Gerry Finn,
Regional Advisor, Data Access and Use,
and
Mr. Doug Newson,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
Arthur Meighen Building,
25 St. Clair Avenue East,
TORONTO 290, ONTARIO.
(Tel.: 416-966-6574)

Mr. Romeo Cinq-Mars,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
Room 500, General Post Office,
266 Graham Avenue,
WINNIPEG, MANITOBA. R3C 0K4
(Tel.: 204-985-3686)

Mr. Les Ellis,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
530 Midtown Centre,
1783 Hamilton Street,
REGINA, SASKATCHEWAN.
(Tel.: 523-3647)

Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
9th. Floor, Baker Centre Building,
10025 - 106th. Street,
EDMONTON, ALBERTA. T5J 1G9
(Tel.: 403-425-5052)

Mr. E.J. Marten,
Regional Advisor, Data Access and Use,
(Tel.: 604-666-3982)

and

Mr. Gordon Strain,
Regional Advisor, Data Access and Use,
(Tel.: 604-666-6478)

User Advisory Services,
Statistics Canada,
Century Building,
16 East Hastings Street,
VANCOUVER, BRITISH COLUMBIA.

Changes in *The Labour Force*

In response to increasing demand for data on this important topic, the Labour Force Survey Division is adding some new features to its major publication, *The*

Labour Force. In November 1973, data on duration of unemployment by age and sex were included, and in December, figures were introduced on the duration of unemployment by marital status and sex. The January 1974 issue presented information on full- and part-time employment by age and by sex.

Series to be included at later dates include duration of unemployment by industry and by occupation, and monthly unemployment rates by industry and occupation. Data on employment by industry and by occupation by age and sex is also forthcoming.

The Labour Force, Catalogue 71-001, monthly, is produced by the Labour Force Survey Division, Statistics Canada, and is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, for \$.40 an issue or \$4.00 a year. This publication is also available from Information Canada, Ottawa and Information Canada bookstores throughout Canada.

More information on the new series may be obtained from Mr. R. Baxter, Labour Force Survey Division, Statistics Canada, Ottawa, Ontario, K1A 0V1 (613-992-9543).

trade flow represents transactions between affiliated companies: this fact complicates the task of determining the appropriate valuation of traded goods, since reported prices are not arms-length market values. In addition, because of the proximity of the business centres of the two countries, many goods flow across the border for very short periods of time without charge or on a rental basis. Decisions about the principles governing the inclusion or exclusion of such transactions from trade statistics have considerable quantitative importance.

The classification of traded commodities must be standardized for any attempt to reconcile statistics for commodity sub-totals. Since both the U.S. and Canada convert their respective (and different) national commodity classifications into the Standard International Trade Classification to report to international agencies, the S.I.T.C. was used as the basis for analyzing discrepancies by commodity. However, time did not permit the two countries' differences in usage of the S.I.T.C. to be investigated as a separate issue with a view to arriving at a correct application of the classification in terms of United Nations definitions. Rather, differences in usage were resolved by the most expedient means available.

The problem of identifying the destination of exports cannot be resolved by convention alone if this destination is unknown at the time of exportation. Quantities of certain grains and oilseeds are exported from the United States to overseas countries via storage facilities in Canadian territory on the upper St. Lawrence River. At the time of export, the last known destination of these goods is Canada and they had in the past been credited to Canada in U.S. export data. Since these goods are in direct transit through Canada, they are not recorded in Canadian statistics, and so a discrepancy occurs. Since January, 1973, however, these shipments have been credited to "unidentified countries" in U.S. export statistics until their final destination has been ascertained.

With the foregoing exception, all discrepancies could be classified as either deliberate or unintentional departures from standard concepts. The former can be identified in principle and, in some cases, were quantified easily in practice; more frequently, the significance and quantitative impact of both types of discrepancies had to be identified through intensive research.

Research Methods Used By Canada and the United States

Canada-United States trade gives rise each month to hundreds of thousands of Customs documents and an equivalent number of transaction records on tape files. Accordingly, data processing on a large scale was a necessary prerequisite to systematic research into discrepancies. Data processing techniques were used to adjust published data for conceptual differences where

possible, to display comparisons of counterpart reports at several levels of commodity detail and to produce supplementary analytical data from transaction records.

A systematic listing of differences between the national and standard conceptual frameworks identified certain sources of discrepancies for which allowance could be made during the initial data processing. Since the United States does not collect Customs documents for transactions valued at less than U.S. \$251, such transactions were deducted from Canadian commodity figures and accumulated for comparison with the U.S. estimate of the total value of such shipments. Similarly, Canadian data for trade with Puerto Rico were added to data for the U.S. to correspond with the U.S. definition of its own territory. Although Canada generally attributes imports to the country from which the goods were first consigned directly to Canada, an exception is made in the case of goods of Central or South American origin re-exported to Canada from the United States: these goods are credited to the country of origin. Since such shipments are included in principle in U.S. re-export figures, these transactions records were reassigned to the U.S. in Canadian data for the reconciliation study. Finally, since the U.S. attributes its imports to the country of origin, the analysis of commodity figures for the southbound flow excluded re-exports from the Canadian data.

Once the tabulations comparing published data by commodity, subject to the above prior adjustments, were available, research proceeded along the familiar lines of developing and testing hypotheses about the discrepancies. The two task forces which conducted the research were able to draw upon the considerable fund of subject-matter and commodity classification experience in the two statistical agencies for many of these hypotheses. The displayed discrepancies themselves offered many clues. For example, an inverse relationship between the level of aggregation and the degree of discrepancy for any commodity aggregate suggested differences in commodity classification principles. Where quantities were measured by both countries, a larger relative difference in values than in quantities suggested either the application of increased valuation of imports by Customs or a difference in the treatment of transportation costs.

The testing of these hypotheses was accomplished in a variety of ways. If its quantitative impact could be estimated independently, the hypothesis was accepted if this estimate eliminated the discrepancy. For example, the inclusion by the United States of natural gas in transit from Western to Eastern Canada in both its import and export statistics generates a specific figure of quantity and value re-exported. Deduction of this figure eliminated the discrepancy in the northbound figures. Similarly, deduction of the re-exported quantity valued at the average U.S. import price (re-export values included pipeline charges in the U.S.) eliminated the

discrepancy in the southbound figures. In a very few cases, systematic differences in commodity classification generated discrepancies of equal magnitude but opposite sign which were easily recognized.

The most difficult discrepancies to quantify accurately were those arising from either unintentional departures from the standard concepts or differences in the classification (in terms of the S.I.T.C.) of a number of related categories of commodities. The systematic matching of the two sets of source documents for all transactions over \$100,000 in value provided much useful information on these issues. This matching exercise, which involved thousands of documents, is described in detail in the Committee's report.

Some general comments may be made on the sources of discrepancy which do not represent conscious deviations from the conceptual standards. Because the main function of any Customs administration is to collect revenue on imports, little evidence was found of failure to collect documents reporting import transactions. But, there was evidence of serious undercounting of exports. The degree of undercounting for any commodity appears to be positively correlated with the number of transactions of relatively small value in that commodity. Some *prima facie* evidence of this may be found in the fact that undercounting of exports averaged 5.3 per cent of the total for the northbound flow, where shipments under U.S. \$251 averaged 2.7 per cent; and 1.4 per cent for the southbound flow, where the corresponding figure for shipments under U.S. \$251 was only 0.5 per cent. Price differences also were mainly associated with the revenue-collecting function of the Customs administrations. The prices at which non-arms-length exports are reported are virtually always intra-company transfer prices. When the same transactions are reported as imports, Customs frequently assign higher valuations for duty purposes; these are the values recorded in import statistics. Intra-company transfer prices were accepted as the standard in such cases on two grounds: these prices enter into the national accounts statistics of the two countries through other reports from the companies concerned and therefore maintain a certain consistency in the accounts framework; moreover, no alternative appears to be definable except in an arbitrary manner. As noted previously, the exclusion of certain categories of transactions from the statistics is an important issue in Canada-U.S. trade because of the extent to which geography and Customs regulations permit affiliated companies in effect to ignore the border in their day-to-day operations. In this regard, Customs administration requirements conflict with statistical requirements and there is a need for the statistical agencies to exercise considerable discretion in the use of tariff classification *per se* as a guide to statistical treatment.

Valuation differences were measured by comparisons of quantity and value aggregates and of prices on matched documents, and by analysis of import

documents on which the adjustments applied to transfer prices by Customs officials are usually explicit. Coverage problems were also measured by analysis of import documents and matching of export with import documents as well as by direct communication with the firm involved. Undercounting of exports was verified by comparing transaction counts by size-of-transaction ranges and, in a few cases, by the intensive study of carefully selected samples of import documents to determine whether export documents were filed.

It is anticipated that, during 1974, the various sources of discrepancy for each commodity will have been measured with sufficient accuracy that it will be possible to express the discrepancy as a specific function of either the import or export figure or of some exogenous variable. This would permit more timely estimates of reconciled figures which could be tested statistically for their efficiency in explaining discrepancies between published totals.

Analytical Techniques for a Multilateral Reconciliation Program

The United States-Canada bilateral reconciliation study is quite intensive and therefore costly. Neither country could expect to gain as much from the same expenditure of resources on a bilateral reconciliation with any other trading partner. Moreover, the special circumstances of this bilateral trade flow do not apply in a wider international framework. For example, the identification of countries of consignment is unquestionably a serious problem in transoceanic trade statistics. Similarly, the transportation cost problem assumes a new aspect in reconciliation with partners who report imports valued at the port of entry. A multilateral and perhaps less intensive research program therefore appears to be the appropriate means of extending the bilateral North American study.

Sometime ago, the United Nations Statistical Office became aware of the widespread interest in the results of this research program. In consequence, a paper was presented to the Fifth Session of the Working Group on International Statistical Programmes and Coordination of the United Nations Statistical Commission in July 1973. The Commission's membership has been concerned about the comparability and reliability of the data collected by the U.N. Statistical Office, and the Working Group strongly endorsed the idea of submitting specific proposals for a multilateral reconciliation program, co-ordinated by the U.N. Statistical Office, to the plenary meeting of the Commission later this year.

The kind of program which might be envisaged would concentrate initially on the exchange of straightforward information and data between the participating countries and a co-ordinating agency, such as the U.N. Statistical Office, to expand the latter's knowledge of

conceptual differences and their quantitative impact. Direct bilateral exchanges between national statisticians would be feasible only when the most important problems had been isolated from the masses of country-commodity comparisons which can be made.

A data base containing all trade statistics reported in the 5-digit detail of the S.I.T.C. may be regarded as a three-dimensional (exporter/importer/commodity) matrix containing as many as five million potential cells for which two reports may be compared, in terms of both quantity and value, for each time period. Even if the detail of some of these dimensions were partially collapsed, it would be beyond the capacity of even the most energetic group of statisticians to analyze so many comparisons. Such a matrix can be analyzed, however, by statistical techniques in a data processing context.

Charts 2 and 3 illustrate an analytical device which is likely to prove useful in the analysis of this matrix. The horizontal and vertical axes represent ratios of the quantity reported by an exporting country to the quantity reported by the partner importing country, and the corresponding ratios of reported values. The properties of the two ratios are defined for each of the four quadrants contained by the 1,1 lines and the 45 degree line identifies equality of average unit values (value divided by quantity). Chart 2 then represents a hypothetical case of undercounting by an exporting country combined with the use of higher prices for the counterpart imports (for example, import prices reflect either customs "uplifts" or transportation costs). Chart 3, on the other hand, illustrates the pattern which would result from faulty identification of the country of destination by an exporting country with no significant differences in average unit values.

Charts 2 and 3 may be viewed as plots from two of the rows of a matrix such as that represented by Table 3. Similar plots may be made of the ratios in the columns of such a matrix that is, from the perspective of importing countries. Similarly, third and fourth dimensions may be added to the matrix, representing disaggregation of total trade flows into commodity flows, and time periods. With more than 75 countries in each country dimension, 1,000 (5-digit S.I.T.C.) commodities and at least 40 quarters in the time dimension, a large number of such two-dimensional plots could be made. Further summarization may be accomplished by counting the number of points in each quadrant and displaying the results as frequency distributions. Analysis then would consist of comparisons of the patterns of frequency distributions taken from the various dimensions of the matrix. For example, problems of identification of the destination of exports could be located by comparisons of frequency distributions in the exporting country dimension with those in the importing country dimension.

Charts 2 & 3

Vx = Value reported by exporter
Vm = Value reported by importer
Qx = Quantity reported by exporter
Qm = Quantity reported by importer

The matrix of ratios could be used in other ways. Comparisons of quantity/value ratios for similar commodities transported equivalent distances should assist in measuring and thereby abstracting from transportation costs in the identification of other valuation problems. Gradual disaggregation of commodity detail would help to isolate both inconsistencies in classification and discrepancies associated with particular commodity flows.

Many of the techniques developed in the bilateral study would be helpful in a multilateral research

program. However, those which involve either the manipulation by computer of transaction records or the matching of counterpart Customs documents could be brought into play only after individual commodity-country flow problems had been identified very specifically. It follows that the proposed multilateral study must make considerably more use of the techniques of mathematical statistics than the bilateral program. Fortunately, the availability of detailed data for many years presents an interesting challenge for the imaginative use of existing techniques as well as for the development of new ones.

Families, 1970.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available on print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 6, Tables 1 to 6 – Inventories, Shipments and Orders

Beginning in this issue, data for 1970 forward are based on the 1970 Standard Industrial Classification. The data from 1971 forward have been revised and benchmarked to the 1971 Census of Manufactures results.

Section 6, Table 11 – Footwear Production

This table has been restructured and its title changed following changes in the method of collecting these statistics. Beginning with January 1974, data for the category "boots and shoes with leather or fabric uppers" (D 2185) are no longer available on the same basis; therefore, this series has been deleted from Table 11 and terminated in CANSIM.

Data in the other categories shown are comparable with data published prior to January 1974.

STUDY OF NET WORTH OF CANADIAN-BORN AND IMMIGRANT FAMILIES, 1970

R.K. Chawla*

In the spring of 1970, Statistics Canada conducted its eleventh Survey of Consumer Finances. In addition to collecting information on the incomes received by families and unattached individuals during the calendar year 1969, the survey also sought information on asset holdings (by type of asset) and indebtedness (by type of debt) of families and unattached individuals at the time of the survey. Furthermore, the survey collected information on the labour force activities of the respondents (both at the time of the survey and during the year 1969) and on how long they have lived in Canada. The information on the latter characteristic was collected in terms of (i) Canadian-born, (ii) pre-1946 immigrant and (iii) other (who stated the actual year of arrival in Canada). The sample of this survey covered both farm and non-farm households.¹

This paper presents limited information derived from a special study based on this survey data – the asset holdings, indebtedness and equity in a home of families by the immigration status of their heads.² The study analyzes and compares the “net worth” held, in the spring of 1970, by non-farm families whose heads were born in Canada and families whose heads arrived in Canada between 1946 and 1960. It also examines the effect of home ownership and equity in a home on the relative “net worth” of these families. Net worth of farm families and unattached individuals³ is not discussed here.

The “net worth” of a family, as used in this paper, is defined as a value remaining after its total debt has been subtracted from its total assets. It consists of miscellaneous net savings,⁴ equity in a home⁵ and investment in other real estate.⁶ It does not include

equity in business or professional interests, investments in unincorporated businesses or private corporations, accrued claims against retirement pension funds or insurance companies, etc. “Net worth” as defined above may be considered as a fair indicator of a family’s financial situation. In view of the fact that it excludes several other types of family assets, it is thus an arbitrary measure and, therefore, should be interpreted carefully.

The analysis presented here does not take into account all the immigrant families but only those headed by persons who arrived in Canada from 1946 to 1960.⁷ This choice was primarily conditioned by the need to form approximately homogeneous groups of families in order to present a meaningful comparison of their net worth. Because net worth of a family accumulates during its life cycle (up to a certain point) and also depends on the family’s home ownership status, it was decided to form a group of immigrant families that showed distributions by age of head⁸ and incidence of home ownership very close to the corresponding distributions of Canadian-born families. If all the immigrant families had been taken as one group – irrespective of the age of head and year of arrival in Canada – the contrasting age composition of sub-groups of families would have yielded poor (that is, non-representative) estimates of net worth.

In sum, therefore, this paper compares net worth held at the time of the survey by Canadian-born and immigrant families who arrived in Canada between 1946 and 1960. The paper also contains a limited study of the equity in a home – a major component of net worth of home-owning families.⁹

Table 1 describes the percentage distribution and average family income of Canadian-born and immigrant families by size of their holdings of net worth. It shows that the overall average net worth and average family income of immigrant families were higher than those of Canadian-born families by 21.8 per cent and 10.5 per

* Mr. Chawla is an econometrician in the Consumer Income and Expenditure Division. Readers who wish to know more about this study are advised to contact the author.

¹ For a detailed account of the coverage of the sample, its sample design, method of estimation, response rate, assignment of missing asset and debt data, reliability of estimates, sampling and non-sampling errors and questionnaires used, see pp. 173-196 of *Incomes, Assets and Indebtedness of Families in Canada, 1969*, Catalogue 13-547, Statistics Canada, Ottawa.

² The family is defined as a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption. Thus, all relatives living together were considered to comprise one family unit whatever the degree of family relationship.

³ Unattached individuals are persons living by themselves or rooming in a household where they are not related to other household members.

⁴ These are financial savings obtained by subtracting total personal debt from a sum of liquid and non-liquid financial assets. For detailed definitions of the items of assets and debts, see pp. 73-76 of *Incomes, Assets and Indebtedness of Families in Canada, 1969*, Catalogue 13-547, Statistics Canada, Ottawa.

⁵ Equity in home is calculated by subtracting the mortgage outstanding on the home from its estimated market value.

⁶ Investment in other real estate is calculated by subtracting the mortgage outstanding from the estimated market value of other real estate. This includes vacation homes but excludes owner-occupied homes.

⁷ This paper distinguishes families only on the basis of whether or not their heads were born in Canada and not on the basis of their Canadian or non-Canadian citizenship status.

⁸ The main reason for excluding immigrant families who arrived in Canada before 1946 and after 1960 was their contrasting distribution by age of head. The survey estimates showed that of all families who arrived in Canada before 1946, 91 per cent had heads aged 45 and over; whereas, in the case of those who arrived between 1961 and spring 1970, 86 per cent had heads under 45 years of age.

⁹ The present paper does not dwell on the percentage distributions of families by size of total asset holdings, total debt, equity in home, etc., as a comparative study of such percentage distributions of families will be included in the main report of this study. The percentage distributions of all families and unattached individuals by size of total asset holdings, total debt, total net worth, equity in home, etc., can be found in the report entitled *Incomes, Assets and Indebtedness of Families in Canada, 1969*, Catalogue 13-547, Statistics Canada, Ottawa.

cent respectively. Because an estimate of overall average depends on, among other considerations, the nature and characteristics of a given distribution, the higher estimate of average net worth for immigrant families could be explained in statistical terms. First, the proportion of Canadian-born families was comparatively higher in the lower net worth groups and lower in the higher net worth groups whereas the reverse was true in the case of immigrant families. For example, 54.6 per cent of Canadian-born families had net worth less than \$10,000 compared with 38.3 per cent of immigrant families.

cent for immigrant and Canadian-born families respectively.

Net worth of a family depends to a considerable extent on its home ownership status. For a home-owning family, estimated market value of home is usually the major asset and the equity in a home itself is the main component of its net worth (see Chart 1). On the other hand, net worth of a non-home-owning family mainly consists of miscellaneous net savings (as defined in

TABLE 1. Percentage Distribution and Average Family Income of Families by Size of Net Worth and Immigration Status of Head, 1970

Size of net worth	Proportion of families		Average family income ¹

¹ Family income consists of the head's, wife's and other members' earned income, investment income, total transfer payments received and income from other miscellaneous sources.

Second, although both the percentage distributions of families by size of net worth showed positive skewness (as the means were greater than the medians), the distribution pertaining to immigrant families had a lower degree of skewness (measured in terms of the difference between the mean and the median of the distribution) than that pertaining to Canadian-born families.¹⁰ The ratios of median net worth to average net worth turned out to be 74.9 per cent and 53.3 per

footnote 4). Therefore, total net worth of a non-home-owning family is usually less than that of a home-owning family – mainly because of its equity in the home.

The question that now arises is whether the difference in the overall average holdings of net worth of Canadian-born and immigrant families is due to the difference with respect to age mix (taken in terms of the age of the head)¹¹ and/or incidence of home ownership.

¹⁰ For a given (frequency) distribution, skewness is defined as: $[3 (\text{mean} - \text{median}) \div \text{standard deviation}]$ which shows that it would be positive if the mean of the distribution were greater than the median. Assuming that the standard deviation of each of the two distributions were almost the same, the difference in the degree of skewness of these distributions could be judged from the magnitudes of the differences in their respective means and medians. That is, the higher (lower) the difference between the mean and the median of the distribution, the higher (lower) the degree of skewness.

¹¹ Age of the head determines, among other things, the level of the family's income and the type of needs (or consumption pattern). Both income and consumption patterns in turn influence the holdings of net worth. For instance, an excess of income over expenditure will have a positive effect on the family's net worth whereas an excess of expenditure over income will have a negative effect on net worth. The latter situation implies that a family will tend to use its savings (for instance, in the old age when income starts shrinking) or incur more debt (for instance, when a young head establishes a new family unit) in order to meet its expenditure.

Table 2 shows that 60.5 per cent of immigrant families had heads aged between 35 and 54 years compared with 44.2 per cent of Canadian-born families. On the other hand, the proportions of families with heads aged less than 35 years, and 65 years and more were higher for Canadian-born than for immigrant families. It is evident, therefore, that the age-mix differential favoured immigrant families in the 35-44 years and 45-54 years age groups. These are periods when the family incomes are quite high which in turn accelerates the growth of net worth, either in terms of a decrease in the financial liability such as the mortgage debt on home or other personal debts or an increase in other financial savings.

heads aged less than 35 years had a substantially higher proportion of home owners than Canadian-born families in the same age group, and that the incidence for immigrant families in the remaining age groups was not much different than that for Canadian-born families. Again, the highest average net worth, amounting to \$30,789, was found for Canadian-born home owners in the 55 to 64 age group whereas in the case of immigrant home owners, the highest average of \$31,065 was found in the 45 to 54 age group. In sum, therefore, it can be stated that, among several other factors, a favourable age mix of families in the 35 to 54 age group and a higher proportion of home owners have resulted in a higher

TABLE 2. Percentage Distribution, Incidence of Home Ownership and Average Net Worth of Families by Age and Immigration Status of Head, 1970

Age of head	Proportion of families		Incidence of home ownership		Average net worth			
					Home owners		All families ¹

¹ Includes home owners and non-home owners.

Table 2 also demonstrates that the accumulation of net worth is a continuous process up to a certain stage in the family's life cycle, beyond which it begins to decline. Canadian-born families in the 55 to 64 age group had the highest average net worth holdings, amounting to \$25,411, whereas immigrant families in the 45-54 age group had the highest average net worth — \$26,162. The present evidence is not conclusive to infer that the rate of accumulation of net worth is faster for immigrant than for Canadian-born families.¹²

Overall incidence of home ownership was higher for immigrant than for Canadian-born families — the corresponding proportions of home-owning families were 70.8 per cent and 63.0 per cent. A comparative study of incidence of home ownership by individual age groups further revealed that immigrant families with

average net worth of immigrant than of Canadian-born families. A further breakdown of estimates of overall average net worth of families by home ownership status is given below:

	Canadian-born	Immigrant	Ratio
	(1)	(2)	(2)/(1)
	dollars		
Non-home owners	3,456	4,304	1.245
Home owners	22,684	24,849	1.095
All families	15,562	18,952	1.218

The net worth differential was higher for non-home owners than for home owners — demonstrating that the ownership of a home reduces the differential of net worth between Canadian-born and immigrant families. On the other hand, as most of the non-home-owning families had heads aged under 35 years, their net

¹² Detailed background of factors responsible for this situation will be provided in the main report of this study which will be included in *Survey of Consumer Finances: Volume II, Selected Reports, 1970*, Catalogue 13-551, planned for future release.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included.

²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total.

³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, non commercial services, plywood households, public administration and defence. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below.²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor of April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C. P. I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Sources: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	inventory at end of month									ratio of inventories owned to shipments
	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports.

⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: New Residential Construction (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. ²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways¹ (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products				
	unadj.	S. A.		wheat	other grain and grain products	fresh fruits and vegetables	other agri-culture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash ²	coal, sand, cement and other mine products

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973 only 6 major railways (accounting for 95% or more of the total operating revenues) are shown. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Sources: The Canada Gazette and Dept. of Finance.

OBSERVATIONS

Services from CANSIM

This is a reminder to our readers of the services available to the public from CANSIM (the Canadian Socio-economic Information Management System). Information on all aspects of the Canadian economy is stored in this Statistics Canada time series data bank, and is updated with each change in data.

This information can be obtained by the public in a variety of ways. For example, there are 454 Consumer Price Index series in CANSIM, of which only 32 are published in the *Canadian Statistical Review*. All 454 series are available to users on tapes or computer printouts. A single order costs \$68 (15¢ a series): a monthly subscription costs \$15 a month (based on computer cost plus 50 per cent).

Users in the private sector now have a third choice — direct access to the entire data base via terminals. Terminal access makes available not only the 45,000 time series in CANSIM, but also MASSAGER and other manipulative programs. Direct access by the

private sector is possible because the data base is now located at a commercial computer service bureau, SMA, (*Société de Mathématiques Appliquées*) in Montreal.

In May 1974, a new feature — YORK APL — was introduced for use with CANSIM. YORK APL makes it possible for persons with little knowledge of computers to retrieve and analyze series stored in CANSIM.

Details on these services may be obtained from CANSIM Customer Service, Room 3162, Statistics Canada Building, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

There are a number of manuals designed to guide CANSIM users. (See the inside back cover of the *Canadian Statistical Review* for a complete listing). Among them is the *Summary Reference Index (SRI)*, a catalogue summarizing the data bank contents by subject and by source publication. The following example is the portion of the 1973 *SRI* relating to the Consumer Price Index series mentioned above.

Prices and Price Indexes, Monthly
Catalogue 62-002

Part E Page 5-1

Prices and Price Indexes, Catalogue 62-002, Monthly, Statistics Canada is a compendium of current statistics on Industrial, Wholesale and Consumer Price Indexes. Each monthly issue includes current monthly data, historical annual data for major series and principal components for periods ranging from four to ten years, and monthly data for up to five years.

Revision Based on 1967 Expenditures

Commencing with the May 1973 index, Canadian consumer price indexes incorporate the latest in a series of periodic updatings which characterise their development since the early 1900s. A feature of the latest revision is the inclusion of updated weights to reflect 1967 family expenditure patterns (and within the food component, 1969 spending habits), replacing the 1957 weights used previously. The time reference base, 1961 = 100, remains unchanged.

To maintain a continuous, long-term series, the revised index is linked to the previously published index for April 1973. Thus the published index up to and including April 1973 remains the official measure of consumer prices to that month, and subsequent price movements are measured by the revised index.

Full details of the latest weighting pattern and other background information on the revised Consumer Price Index, including a comparison of the movements of both the old and the revised series since 1967, are contained in an occasional paper entitled *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539, Price \$0.75, available from the Publications Distribution Unit, Statistics Canada, Ottawa.

Conference on Statistics for Corporate Decision-making

A successful Conference was held at the University of Western Ontario on February 15 and 16, 1974, dealing with "Statistics for Corporate Decision-Making". It was jointly sponsored by the University of Western Ontario, the Financial Executives Institute Canada, and Statistics Canada. There were more than 200 persons in attendance, representing primary and secondary industries, retail and wholesale trades, financial institutions, provincial government statisticians, and the academic community.

The Conference represented the culmination of a series of discussions between the three sponsoring organizations extending over a period of 12 months. During that period, it became increasingly apparent that there was an urgent need to increase the availability, understanding and proper use of statistics both in the corporate financial decision-making process, as well as in areas of university-based research. Effective liaison between the three sponsoring organizations was considered to be a positive step in this direction.

The primary objectives of the three sponsors were identified early in the discussions. The corporate executives wanted a clearer measurement of what statistical

information was available to strengthen management policy decisions. The University of Western Ontario, School of Business Administration, recognized the importance of developing and maintaining an educational environment that was designed to provide optimum support to the corporate executive. Statistics Canada sought to improve its perspective concerning the range of statistics needed by the corporate executives and the academic community.

Before the decision to hold this Conference was reached, the sponsoring bodies did considerable research. First, a questionnaire was designed to seek out the information needs of senior officers in the industrial corporations field. This work was a joint effort by Statistics Canada and the School of Business Administration Faculty of the University of Western Ontario. The purpose of the questionnaire was to identify:

- (a) those specific statistical areas of particular interest to corporation management teams,
- (b) the types of statistical information regularly used by business management,
- (c) the nature of special studies requiring statistical support,
- (d) statistical areas where improvements were needed,

- (e) statistics of a perishable nature, and some idea of their critical time limits,
- (f) views of the business community on the value of data banks,
- (g) ways and means of improving Statistics Canada's liaison with both respondents and users in the business sector,
- (h) views on the utilization of special services available from Statistics Canada on a fee basis.

Once the design had been established, the questionnaire was tested in the field and found effective for its purpose. Copies were then mailed to about 400 company executives across Canada. One hundred complete responses were received and analysed.

A number of executives pointed out that Statistics Canada programs provide aggregates designed for analysis on a national or provincial base, but they felt that insufficient attention is given to the requirements of industry for data on a smaller regional base. The observation was made by some that current statistical groupings by industry are too large to serve many of the analytical needs of industry, and it was recommended that more consideration be given to the development of projections and forecasts. The business community would also like to have a clearer enunciation of the usefulness of statistics produced in a number of subject matter areas.

In a surprising number of cases, it appeared that corporate executives were not familiar with Statistics Canada's products, depending rather on the opinions expressed by professional analysts, as reflected in trade journals, and the news media. They were aware of the problems in their own industry, and were endeavouring to obtain assistance to resolve these, but many did not seem to realize that the information produced by Statistics Canada could be used to greater advantage in its present forms. At the same time, many of the informational requirements indicated by this survey were within a time horizon and level of detail that appear to be impossible for Statistics Canada to accommodate. It was also re-emphasized that if Statistics Canada were to provide the level of service indicated, the bureau would need, among other things, a much better response to its surveys.

A reference to the Conference program provides a good indication of the nature and range of the subjects covered.

There were six plenary sessions, each with a main speaker, followed by discussions. These were:

Statistics — Tools for the Corporate Executive

Speaker — Arthur J. Smith, The Conference Board in Canada

The Changing Face of Statistics Canada

Speaker — Sylvia Ostry, Chief Statistician of Canada

Financial Statistics — Today and Tomorrow

Speaker — J. Harvey Perry, Executive Director, The Canadian Bankers' Association

The Position of Statistics Canada in the Information Chain: a Case for Integration

Speaker — Peter G. Kirkham, Assistant Chief Statistician, (Economic Accounts and Integration) Statistics Canada

The Decision-making Process — If We Only Knew

Speaker — Harry Bowler, Vice President (Finance), Bell Canada

Corporate Management Research

Speaker — John J. Wettlaufer, Dean and Professor, School of Business Administration, The University of Western Ontario

In addition to the plenary session, five concurrent workshops were held on the Friday evening, under the direction of V.R. Berlinguette, Assistant Chief Statistician (Business Statistics) Statistics Canada. The topic of the workshops were:

- Corporation Finance;
- Production and Trade Statistics;
- Business Capital Investment as an Indicator of Future Economic Conditions;
- National Income and Expenditure Accounts;
- Prices.

These workshops were led by panels made up of one representative from Statistics Canada, one from the University of Western Ontario, and one from the Financial Executives Institute.

A systematic follow-up to this Conference is recognized as an important step, and arrangements have already been initiated whereby the Regional Offices of Statistics Canada will contact all Conference delegates located in their particular region, with a view to pursuing in more specific detail some of the matters raised.

Statistics Canada plans to publish a report on the Conference and those interested should contact User Advisory Services, Marketing Services, Statistics Canada, Ottawa.

More information on this topic is available from G.A. Wagdin, Special Advisor, Integration, Economic Accounts and Integration, Statistics Canada, Room 1261, No. 5 Temporary Bldg., Ottawa, Ontario, K1A 0Z5.

Source of Information on Vacation Homes

Vacation Home Data Sources and Research in Canada, a consultant's report prepared for Statistics Canada, contains a preliminary review of the kinds of data related to vacation homes in Canada available to research workers from sources other than Statistics Canada. A partial bibliography of studies with material relating to vacation homes covering 1965 to 1972 is also included. Copies of the report are available from the Travel, Tourism and Recreation Section, Education, Science and Culture Division, Statistics Canada, Ottawa, K1A 0T6.

worth differential could be attributed to the differences in their incomes, consumption patterns and other socio-economic incentives.¹³

Chart 1 exhibits the percentage composition of net worth of families by their home ownership status. In the case of home owners, the equity in a home had the largest share of the net worth pie — amounting to 72.4 per cent and 60.2 per cent for immigrant and Canadian-born families respectively. The proportion of investment in other real estate, however, did not vary much among home-owning families.

Miscellaneous net savings (see footnote 4), formed the major share of net worth of non-home-owning families. These constituted 73.7 per cent and 65.2 per cent of net worth of immigrant and Canadian-born families respectively. The rest of the net worth of non-home-owning families consisted of investment in other real estate. It may also be noted that the share of investment in other real estate in net worth of non-home owners was higher than that of home owners — for both Canadian-born and immigrant families.

Equity in a Home

In view of the significance of the equity in a home in the net worth of a home-owning family, this section of the paper contains a limited study of factors that affect the equity in a home. In this context, we will also examine whether average net worth, excluding equity in a home, of immigrant families exceeds that of Canadian-born families. The estimates of averages presented in this section are based on a universe of home-owning families only.

The proportion of equity in a home in the overall net worth of immigrant home owners was higher than that of their Canadian-born counterparts. In dollar terms, the average equity in a home amounted to \$17,998 for immigrant families and \$13,669 for Canadian-born families — a differential of 31.7 per cent in favour of the former group. Why do the estimated averages differ for these groups of families?

There are two main reasons: (i) differences in the period when house was purchased; and, (ii) differences in terms of the area of residence. Underlying the first factor may be differences in the head's age at the time of purchase, the size of the family's income and savings (for making a down payment for the home) and national economic conditions as well as the demand and the supply situation for homes at the time of purchase. The differences in terms of the area of residence, on the other hand, imply differential concentration of families

in areas such as metropolitan, other cities, small urban or rural. Table 3 shows the concentration of home-owning families by immigration status of the family head and area of residence.

TABLE 3. Percentage Distribution of Home-owning Families by Area of Residence and Immigration Status of Head, 1970

Area of residence	Canadian-born	Immigrant
	per cent	
Metropolitan ¹	49.4	82.5
Other cities ²	7.4	3.2
Small urban ³	14.9	7.7
Rural	28.3	6.6
Total non-metropolitan	50.6	17.5
Total	100.0	100.0

¹ Centers with population of 30,000 and more.

² Centers with population between 15,000 and 29,999.

³ Centers with population less than 15,000.

The table shows that immigrant families are highly concentrated in metropolitan areas whereas Canadian-born families are dispersed almost equally between metropolitan and non-metropolitan areas. Furthermore, it is known that the purchase price of homes and their appreciation over time has been higher in metropolitan areas (for instance, because of increases in the cost of land) than in non-metropolitan areas. Therefore, the larger concentration of immigrant families in metropolitan areas together with the higher price of homes in these areas would result in a higher overall average (present) market value of homes for immigrant families than for Canadian-born families. Some relevant averages for selected items can be compared from Table 4.

It is well known that market values have been steadily rising during the post-war period. Immigrant families on the average have been the more recent buyers of homes — average length of ownership is 7.4 years compared with 13.1 years for Canadian-born families (see Table 5). Immigrant families have paid more for their homes originally — \$16,804 versus \$11,880 for Canadian-born families (see item a of Table 4). This may be partially due to the difference in location, and partially due to the difference in the time of purchase.

Thus, the data in Table 4 indicate that the higher present market value of homes is largely due to the higher average purchase price and the higher appreciation over time — the latter also having contributed substantially to the higher average equity in homes for immigrants compared with Canadian-born families. The higher average equity in homes fully accounts for the higher average net worth of immigrant home owners which is 9.5 per cent more than that of their Canadian-born counterparts. The average net worth, excluding average equity in

¹³ For instance, all other things being equal, a young immigrant head of the family may have higher motivation than a Canadian-born head to save more in order to protect and fulfill economic needs originating in connection with settling down in a new place.

a home, of Canadian-born home owners exceeded that of immigrant home owners by 31.6 per cent. This limited evidence leads us to conclude that the size of the equity in a home is a major factor in determining the relative financial situation (or holdings of net worth) of Canadian-born and immigrant families.

Other relevant features revealed by Table 5 can be summarized as follows.

- (i) For both groups of home-owning families, the proportion owing mortgage debt on the home steadily declined as the number of years of residence

TABLE 4. Selected Factors Affecting Current Equity in Home for Home-owning Families by Immigration Status of Head, 1970

Item	Canadian-born (1)	Immigrant (2)	Ratio (2)/(1)
	dollars		
a Purchase price of home ¹	11,880	16,804	1.414
b Current market value of home	17,856	24,801	1.389
c Appreciation in the value of home over time (b - a)	5,976	7,997	1.338
d Current mortgage debt on home ²			
d ₁ All home owners	4,187	6,803	1.625
d ₂ Debtors only	8,425	10,049	1.193
e Current equity in home (b - d ₁)	13,669	17,998	1.317
f Total net worth	22,684	24,849	1.095
g Total net worth excluding equity in home (f - e)	9,015	6,851	0.761

¹ Not adjusted for length of home ownership nor for differences in terms of the size of family's income and savings at the time of purchasing a home, etc. Moreover, the estimated averages are based on 2,006 thousand Canadian-born and 320 thousand immigrant families who reported the purchase price of home. See Table 2 for total estimated number of home-owning families in each of the two groups.

² As reported at the time of the survey.

TABLE 5. Percentage Distribution of Home-owning Families and Average Equity in Home¹ by Mortgage Debt Status, Number of Years of Residence² and by Immigration Status of Head, 1970

	Number of years of residence						All home owners		Average period of residence	
	Less than 5		5 to 10		11 and more					
	Canadian-born	Immigrant	Canadian-born	Immigrant	Canadian-born	Immigrant	Canadian-born	Immigrant	Canadian-born	Immigrant
	per cent								years	
Proportion of families:										
Without mortgage debt . . .	27.3	13.6	34.0	39.1	75.1	53.7	50.3	32.3	19.1	10.6
With mortgage debt	72.7	86.4	66.0	60.9	24.9	46.3	49.7	67.7	7.0	5.8
All home owners	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	13.1	7.4
	dollars									
Average equity of families:										
Without mortgage debt . . .	12,433	*	14,626	20,946	13,994	19,659	13,853	22,039		
With mortgage debt	11,372	14,647	14,275	18,184	16,606	18,325	13,534	16,412		
All home owners	11,758	17,305	14,376	19,036	14,653	19,157	13,669	17,998		

* Sample too small for reliable estimate.

¹ Average equity in home is defined as the difference between the average estimated market value of the home and the average mortgage indebtedness on the home.

² Number of years of residence is derived in terms of the difference between the year the survey was taken (1970) and the year the house was acquired as reported by a home-owning family.

increased.¹⁴ As expected, such proportion was the highest for families with less than 5 years of residence.

(ii) The average equity in a home increased as the number of years of residence increased — both for Canadian-born and immigrant home owners. The corresponding estimates of \$14,653 and \$19,157 were the highest in the case of families with 11 and more years of residence. An increase in the equity in a home during the period of residence may be the result of repayment of mortgage debt or appreciation in the value of home or other improvements or extensions undertaken.

(iii) The difference between the average equity for immigrant and Canadian-born home owners declined as the period of residence increased. Such differentials, in favour of immigrant families, amounted to 47.1 per cent, 32.4 per cent and 30.7 per cent for families with less than 5 years, 5 to 10, and 11 and more years of residence respectively.

(iv) As expected, the average equity in a home for families without mortgage debt exceeded that for families with mortgage debt, irrespective of the

period of residence, for both Canadian-born and immigrant home owners.¹⁵

(v) For families owing mortgage debt on the home, the average period of residence did not vary much between the two groups. However, as expected, in the case of families without mortgage debt, the average period of residence was higher for Canadian-born than immigrant families. Unpublished data indicate that 44 per cent of Canadian-born home owners reported 11 and more years as the period of residence compared with 22 per cent of immigrant home owners.

Table 6 contains estimates of average equity in homes by age of the family head and number of years of residence. This table complements Table 2 which describes estimates of average net worth by age of the family head and home ownership of Canadian-born and immigrant families. The statistical evidence from these tables further revealed that the differences with respect to the proportion of average equity in a home in the average net worth for home owners varied substantially for families in the 35-44 years and 55-64 years age groups in the case of immigrant families, as shown in Table 7.

¹⁴ This is derived by subtracting the reported year the family acquired the present home from the survey year, 1970. This definition has one serious limitation; that is, it does not take into account the mobility of home owners. In other words, the home where the family was living at the time of the survey could be the second or third or fourth for the family. In that event, equity in a present home would be affected by carry-over effects (in terms of initial equity, purchase price, mortgage debt, etc.) of previous homes. The estimates presented in Tables 5 and 6 should be interpreted carefully.

¹⁵ An exception was in the case of Canadian-born families reporting 11 and more years as the period of residence, where the reverse was true. This is probably due to the fact that home owners without mortgage debt in this case are older people owning older homes. The current market value of their homes would be low due to the age, resulting in a low average equity. For instance, it may be noted that average period of residence for families without mortgage debt in this category was 26 years compared with 16 years for those with mortgage debt.

TABLE 6. Average Equity in Home¹ by Age of Head, Number of Years of Residence² and by Immigration Status of Head of Home-owning Families, 1970

¹ Average equity in home is defined as the difference between the average estimated market value of the home and the average mortgage indebtedness on the home.

² Number of years of residence is derived in terms of the difference between the year the survey was taken (1970) and the year the home was acquired as reported by a home-owning family.

TABLE 7. Equity in Home as a Percentage of Average Net Worth for Home Owners by Age and Immigration Status of Head, 1970

Age of head	Ratio of average equity in home to average net worth for home-owning families	
	Canadian-born	Immigrant
	per cent	
Less than 35 years	81.9	80.6
35-44 years	65.0	82.8
45-54 "	60.3	66.7
55-64 "	50.4	62.9
65 years and over	52.9	*
Total	60.2	72.4

* Sample too small for reliable estimate.

It is interesting to note that the average equity in a home as a proportion of net worth of families with heads aged less than 35 years was almost the same for Canadian-born as for immigrant home owners. This is probably due to the fact that immigrant heads who came to Canada as young children developed modes of living similar to Canadian-born heads. Thus, the difference with respect to the size of family income, family composition, consumption patterns, etc. — the most important factors affecting the net worth of a family — would almost be negligible between Canadian-born and immigrant families with heads under 35 years of age.

However, for families in the rest of the age groups, the proportions of average equity in a home in the average net worth were higher in the case of immigrant families.

Conclusion

This study has shown that overall average net worth of both home-owning and non-home-owning immigrant families (whose heads arrived in Canada between 1946 and 1960) was higher than that of their Canadian-born counterparts. The incidence of home ownership was higher in the former group as well. For both groups of families, the equity in a home constituted a major share of net worth of home owners whereas the miscellaneous net savings formed the major segment of the net worth of non-home owners.

The size of the equity in a home was a major determinant in the relative financial situation of Canadian-born and immigrant home-owning families. For example, the average net worth including equity in a home of immigrant home owners was 9.5 per cent higher than that of Canadian-born home owners; whereas, the average net worth excluding equity in a home of the

Canadian-born group exceeded that of the non-Canadian-born group by 31.6 per cent. This showed the overall significance of the size of the equity in homes of immigrant home owners and the extent to which this affected their overall average net worth.

The proportion of average equity in a home in the average net worth did not vary much between Canadian-born and immigrant home-owning families with heads aged less than 35 years. However, for families in the age groups 35 to 44, 45 to 54 and 55 to 64 years, such a proportion showed a considerable variation in favour of immigrant families.

The average equity in a home increased as the period of residence increased. The difference between the average equity in homes of immigrant and Canadian-born families declined as the period of residence increased.

Finally, it may be noted that this paper does not answer satisfactorily the question of why the equity in homes of immigrant families is higher than that of Canadian-born families. This may be due to the difference in the head's age and the time period when the house was purchased, appreciation in the value of home over time, initial equity (that is, the purchase price of the home minus the total mortgage debt undertaken at the time of purchase), period of home ownership, area of residence, etc. This paper briefly examined the effects of the differences in terms of the area of residence on the average equity in homes of Canadian-born and immigrant home owners. The main report (see footnote 12), will analyze the effects of all these factors on the current equity in homes and also compare, in quantitative terms, the effects of these factors for these two groups of families.

UNIVERSITY OF TORONTO

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available on print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 6, Table 10 - Raw hides, skins and finished leather

The series "Wettings - Sheep and lamb skins" (D 2148) has been deleted with this issue. However, the series will remain SECURE on CANSIM.

CORRECTION

In the April 1974 OBSERVATIONS (p. 114), the telephone number of the Regina User Advisory Services office was incorrectly reported. The address and corrected telephone number are:

Mr. Les Ellis,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
530 Midtown Centre,
1783 Hamilton Street,
REGINA, SASKATCHEWAN.
(TELEPHONE: 306-523-2647)

In the first quarter of 1974 GNP at market prices rose by 4.9 per cent, to a level of \$132.1 billion. After discounting for price rises, the volume of production rose by 1.7 per cent.

On the income side, labour income continued to rise at a strong rate of over 4 per cent; corporation profits also rose but at a lower rate than during 1973.

Quarterly changes in GNP and components

All data seasonally adjusted at annual rates.

Both exports and imports of goods and services rose at rates similar to those experienced in the final quarter of 1973. The overall deficit was little affected as a rise of \$72 million in the merchandise surplus was offset by an increase of \$88 million in the non-merchandise deficit.

As in the previous quarter demand strength was widespread. Consumer and capital outlays showed a further acceleration in both value and volume terms and accounted for most of the increase in real GNP. Exports on the other hand were a source of weakness in volume terms.

Quarterly changes in GNE and components in constant (1961) dollars

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

First Quarter 1974

Revisions to incorporate the latest data available from annual surveys have been included in this report for the year 1973.

Preliminary estimates of the National Income and Expenditure Accounts indicate a continuation of strong economic growth in the first quarter of 1974. After a revised fourth quarter increase of 4.4 per cent, Gross National Product, seasonally adjusted at annual rates, rose by 4.9 per cent, to a level of \$132.1 billion. A faster increase in employment accompanied by an equivalent growth in the labour force resulted in an average unemployment rate for the quarter that was unchanged at 5.5 per cent.

The implicit price index for Gross National Expenditure rose at an accelerated rate of 3.2 per cent in the first quarter, compared with 1.8 per cent in the fourth. After discounting for price rises, the volume of production of goods and services rose by 1.7 per cent, on the heels of an unusually large gain of 2.6 per cent in the fourth quarter. Final domestic demand¹ rose by 4.8 per cent, compared with 4.2 per cent in the fourth quarter. On the basis of this measure, the rate of price rise was virtually identical in the fourth and the first quarters, 2.0 per cent and 2.1 per cent respectively.

As in the previous quarter, demand strength was widespread, with practically all components showing sizable gains. Consumer and capital outlays showed a further acceleration in both value and volume terms and accounted for most of the increase in real GNP. The rate of non-farm inventory investment also rose, although not as rapidly as in the previous quarter. In the external sector, both exports and imports of goods and services rose at rapid rates, leaving the balance on such transactions little changed. However, in real terms, exports were a source of weakness in the first quarter. Substantial increases were generated in most factor income categories.

The continued expansion of the Canadian economy contrasted sharply with preliminary estimates of first quarter developments in the United States, where real Gross National Product declined by 1.5 per cent following three quarters of relatively small percentage increases. This departure from historic patterns can be explained in part by the recent energy situation, which appears to have had a more severe impact on the United States economy, notably in the automobile industry, and in part to differences in residential construction activity which has continued to be a source of strength in Canada.

¹ Final domestic demand includes consumer and government expenditure on goods and services and fixed capital formation; it excludes inventory change and exports of goods and services.

Consumer Outlays

Consumer spending has been a mainstay of the economic expansion underway since 1971. These outlays rose by \$3.2 billion or 4.4 per cent in the first quarter compared with 3.9 per cent in the fourth quarter. The implicit price index again rose at a moderate rate, relative to the other components of Gross National Expenditure. In volume terms, the gain was 2.4 per cent compared with 1.9 per cent in the fourth quarter. Increased outlays were concentrated in the goods categories, which all showed sizable gains. Services, on the other hand, rose at a moderate pace of 2.1 per cent, over half of which was accounted for by rising prices.

In the durable goods category, which showed a rise in outlays of 6.1 per cent, strength was widespread. Increased spending on furniture and on electrical appliances was especially notable. Outlays on new automobiles (which account for almost 30 per cent of the spending in that group) rose by about 5 per cent after three quarters of fairly slow growth.

Impressive and widespread gains were also noted in spending on semi-durable goods, up 5.6 per cent, and non-durable goods, up 5.7 per cent. In the former group, there was a marked increase in expenditure on clothing. Within non-durables, outlays on food continued to rise sharply. For the second consecutive quarter, the increase in food prices, although still high, was below the increases experienced during the first three quarters of 1973.

Fixed Capital Formation

In percentage terms, the sharpest advance in first quarter demand occurred in the fixed capital sector, which posted a 7.6 per cent rise in outlays. Even after allowing for price acceleration, particularly evident in material components used in non-residential construction, such as steel and other metals, the gain in real terms was 4.2 per cent compared with 2.6 per cent in the previous quarter. All components showed sizable gains, but the most impressive increase was in business plant and equipment which rose by 9.2 per cent after a 6.1 per cent rise in the fourth quarter. Outlays on non-residential construction rose by 8.7 per cent in current dollar terms and by 3.9 per cent in volume terms — the largest gain since the first quarter of 1973. In this group, expenditure on both buildings and engineering construction rose at an accelerated pace. Machinery outlays surged in the quarter, rising by 9.6 per cent in current dollar terms and by 6.1 per cent in volume terms. Although all components of machinery and equipment posted notable gains, the largest absolute increase was shown by commercial vehicles.

The boom in residential construction, which started in mid-1970, continued in the first quarter. Spending rose by 4.8 per cent, after a 5.7 per cent rise in the fourth quarter of 1973. Unlike other categories of fixed investment, price rises in this area were moderate, largely due to a decline in the price of lumber, in line with weakening United States demand. In real terms, the gain was 3.5 per cent. With the exception of spending on row housing, expenditure on all types of dwellings increased, with single detached dwellings accounting for more than three-fifths of the total gain. On a seasonally adjusted basis, housing starts rose by 9.0 per cent in the quarter, to 282,200 in the first quarter from 253,200 in the fourth.

Inventory Investment

Non-farm inventory investment also contributed to the rise in demand, although to a much smaller extent than in the previous quarter. Stocks rose by \$1,984 million after a rise of \$1,436 million in the fourth quarter and \$344 million in the third quarter of 1973. Practically all of the first quarter build-up occurred at the manufacturing and wholesale levels. Features of this accumulation were a record build-up of stocks of raw materials in manufacturing and a second consecutive large accumulation of construction materials at the wholesale level.

Although stock increases were widespread within manufacturing, over half of the accumulation took place in the food and petroleum industries. In contrast with the large accumulation in wholesale trade, stocks at the retail level rose moderately as a substantial decline in the stocks of motor vehicles dealers offset increases elsewhere. The stock-to-shippments ratio in manufacturing rose somewhat, whereas stock-to-sales ratios declined in trade, especially at the wholesale level.

The External Sector

Both exports and imports of goods and services rose at rates similar to those experienced in the final quarter of 1973, the former by 8.5 per cent, the latter by 8.2 per cent. The overall deficit was little affected as a rise of \$72 million in the merchandise surplus was offset by an increase of \$88 million in the non-merchandise deficit.

The value of merchandise exports rose by 8.9 per cent. A little over half of the gain was attributable to the higher rate of tax on crude petroleum exports, which was raised from \$2.20 to \$6.40 per barrel at the beginning of February. This tax (which is also reflected in a sharp increase in indirect taxes on the income side of the accounts) was the major cause of the sharp increase in the implicit price for exports, which rose by 9.9 per cent compared with a 7.2 per cent rise in the previous period. In addition to petroleum, wheat, chemicals, woodpulp and newsprint contributed to the rise in the value of exports. In real terms, merchandise

exports declined slightly, mainly because of declines in lumber, petroleum and motor vehicle parts.

The value of merchandise imports rose by 9.4 per cent. The strong rise in investment spending was reflected in particularly large increases in imports of fabricated steel, agricultural machinery, trucks and tractors, and miscellaneous equipment and tools. Imports of automobiles and parts declined somewhat so that the increased outlays on motor vehicles by business and consumers appear to have been met by domestic production.

Incomes

On the income side, wages and salaries rose by 3.8 per cent after a gain of 4.6 per cent in the fourth quarter. Both the employment and average earnings components increased. Total labour income rose by 4.2 per cent compared with 4.5 per cent in the fourth quarter because of a large increase in supplementary labour income that was attributable to higher rates of employer contributions, effective in January, to the Unemployment Insurance Fund and to the Canada and Quebec Pension Plans.

Wages and salaries in goods-producing industries rose by 3.2 per cent. Within that group, wages and salaries in manufacturing rose at a lower rate than in the previous quarter, 2.4 per cent compared with 5.0 per cent, partly reflecting weakness in employment. Wages and salaries in the construction industry, on the other hand, rose by a strong 4.8 per cent. In service-producing industries, where wages and salaries rose by 4.1 per cent, increases were widely spread but particularly notable in the transportation, communications and other utilities industries which showed a rise of 8 per cent, partly reflecting wage increases and retroactive payments awarded to the railway employees following arbitration of their labour dispute. Wages and salaries in trade and in public administration also rose very strongly.

Preliminary estimates indicate a rise of 6.2 per cent in corporation profits before taxes, compared with an average quarterly rate of advance of around 10 per cent in 1973. Within manufacturing, substantial gains were noted in paper, printing and publishing, metal fabricating, non-metallic minerals and chemicals industries. Wholesale and retail trade also posted large profit advances. As in recent previous quarters, a substantial part of the profit rise reflected inventory gains. The inventory valuation adjustment — a negative entry on the income side in periods of rising prices in order to remove that part of income which reflects the turnover of goods at rising prices — rose to a record level in the quarter.

Estimates of the accrued net income of farm operators from farm production indicate an increase of 5.0 per cent over the fourth quarter to an annual rate of \$3,952 in the first quarter. Much of the increase was

generated in the value of grain production with the value of the 1974 crop, based on acreage intentions and five-year average yields, estimated to be about 50 per cent higher than the estimate for 1973. The value of production of other farm commodities showed little change.

Price Movements

The implicit price index for Gross National Expenditure rose 3.2 per cent, a much faster pace than the fourth quarter increase of 1.8 per cent. More rapid price rises were recorded in plant and equipment and in the external sector. Price movements in the quarter were influenced by an appreciation of the Canadian dollar with respect to a number of major trading currencies. This tended to push up export prices and moderate the import price increase. A substantial part of the acceleration in the overall index was due to changed spending patterns in recent quarters between inventory investment and other categories of demand. Excluding the value of physical change in inventories, prices rose about 3 per cent in both the fourth and first quarters.

The implicit price index for personal expenditure rose at the same rate, 1.9 per cent, as in the previous quarter. Strong price increases in all goods components were somewhat dampened by a slight deceleration in the price index of services. Prices of durable goods rose 2.0 per cent, with the greatest increase shown in prices of household goods and furnishings, and in car prices. Prices for semi-durable goods (such as clothing, books, newspapers, magazines, etc.) rose a substantial 2.7 per cent. In the non-durable goods category, which showed a 2.5 per cent price increase, home heating fuels, gasoline, oil and grease continued to rise strongly. The 3.2 per cent increase in food prices represents some moderation from the very high rates of increase witnessed in 1973. Within services, an upsurge in the prices for taxi cab fares and hotel accommodation were largely offset by some deceleration in prices of other items.

There was a considerable rise in the prices associated with business fixed capital formation, which rose 3.1 per cent compared with 2.4 per cent in the fourth quarter. This acceleration was due to large price advances for non-residential building materials and machinery and equipment. All the building materials components — concrete products, plumbing and heating, electrical equipment and sheet metal — were up sharply. A decline in lumber prices, however, restrained the rise of residential building prices relative to the prices of other construction components.

Of significance were the large gains posted in the external sector. The implicit price for exports of goods and services rose by 8.7 per cent in the quarter. An increase in merchandise prices, up 9.9 per cent overall, was centered in a 44 per cent increase in the price of crude materials, in particular crude petroleum prices,

which were up 87 per cent as a result of an increase in the oil export tax. Among other merchandise export prices which rose very strongly were wheat prices, up 29 per cent, woodpulp, up 16 per cent, newsprint, up 8 per cent, aluminum, up 12 per cent, and zinc, up 11 per cent. Lumber prices, on the other hand, showed a 4 per cent decline. Within finished goods, prices for motor vehicles and non-agricultural machinery and equipment were up sharply.

The implicit price index of imports of goods and services rose 5.4 per cent, with the merchandise component showing an increase of 6.1 per cent. As in exports, crude materials prices led the advance with a jump of close to 50 per cent resulting from a very substantial increase in crude petroleum prices. Some items in the food group declined, but large price increases for vegetables, sugar and cocoa were noted. An 8 per cent increase in fabricated materials was largely influenced by price rises in petroleum and coal products, iron and steel alloys and other metals. The prices of finished goods, which form a large proportion of total imports, rose only moderately.

The Government Sector

Total revenues of the government sector (excluding intragovernmental transfers) rose sharply, by 8.3 per cent, in the first quarter of 1974. About half of the gain was in revenue from indirect taxes where over half of the increase took place at the federal level, mainly reflecting the higher rates imposed in February of the oil export tax. At the provincial government level, the increases were widespread throughout the categories while at the local government level, the increase was in real property taxes. Returns from direct taxes also rose strongly, reflecting both the continuing high levels of income and increased rates.

Total government expenditures also rose sharply, by 7.0 per cent in the quarter. There were substantial increases in transfer payments to persons, outlays on goods and services and subsidy payments. The major factor in the higher transfers to persons was the raising of the family allowance rate so that the family and youth allowances paid in the quarter more than doubled from the amount in the fourth quarter. Outlays on goods and services increased at all levels of government, although the rise was strongest at the federal level. The very sharp increase in subsidy payments was concentrated at the federal level and reflects the introduction of a subsidy to oil consumers in Eastern Canada and higher payments to the railways.

With the increase in government revenues greater than in expenditures, the surplus of the government sector, seasonally adjusted at annual rates and on a national accounts basis, increased from \$1,500 million in the fourth quarter to \$2,212 million in the first quarter. The increase was spread about equally between the federal and provincial governments and the Canada Pension Plan. The other levels showed little change.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, non commercial services, plywood households, public administration and defence. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held				ratio of inventories owned to shipments
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1970 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories¹ by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non- durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports.

⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports.²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentones plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. Source: Building Permits (64-001), Statistics Canada.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: New Residential Construction (64-002), Statistics Canada.

Notes: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

Sources: Prices and Price Indexes (62-002), Index Numbers of Farm Prices of Agricultural Products (62-003), Statistics Canada.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last current year are not so adjusted.

²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of unification within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 6.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁷Bills due for residential/domestic use of telephones, gas and electric power. ⁸Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11.²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months.³Includes special transaction-trade, not shown separately.⁴Includes scrap.⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is included prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada; Air Carrier Financial Statements (51-206) Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. ³Excludes distribution systems. ⁴Received from field and processing plants by transport systems. Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares. Source: Bank of Canada Review.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries except electrical machinery and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, Statistics Canada.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Industrial Research Expenditures

Expenditures for industrial research in provincial non-profit institutes are published in a new report of Statistics Canada's Education, Science and Culture Division. This report is the first separate presentation of data on these activities. Comparable data for previous years may be found in *Industrial Research and Development Expenditures in Canada*, Catalogue 13-203.

Copies of *Expenditures of Provincial Non-profit Industrial Research Institutes, 1972*, Catalogue 13-209, annual, are available for \$.70 from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or from Information Canada, Ottawa and Information Canada stores across Canada.

Inquiries about the contents of the report may be directed to J.B. Robertson, Education, Science and Culture Division, Statistics Canada, Ottawa, Ontario, K1A 0Z5 (613-994-5247).

New Consumer Finance Report

In May 1974, the Consumer Income and Expenditure Division of Statistics Canada released a report of the earnings and work experience of the 1971 labour force. Data for this publication were collected in addition to the usual information on incomes and expenditures in Survey of Consumer Finances conducted in April 1972.

Information on labour force participation and earnings, by age, sex, family status and many other characteristics is presented for 1971 for Canada and, in some cases, for regions.

Copies of *Earnings and Work Experience of the 1971 Labour Force*, Catalogue 13-554, occasional, are available for \$1.40 from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 or from Information

Canada, Ottawa and Information Canada stores across Canada.

Inquiries about the contents of the report may be directed to A. Rashid, Consumer Income and Expenditure Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (613-992-3200).

Research Reports Dealing with Assets, Debts and Housing Status of Families

The Research and Analysis Section of the Consumer Income and Expenditure Division has produced the first of two compendia containing three reports dealing with special topics. These are based on the data collected during the 1964 and 1970 Surveys of Consumer Finances.

The **first** report examines the changes in assets and debts of non-farm families, classified into cohort groups, over a period of six years from 1964 to 1970. The **second** report deals with the types of personal debts owed by husband-wife families. The analysis, based on a multivariate statistical technique, identifies the relationship between the type of personal debt and a few family characteristics. The **third** report analyses the housing status of families with respect to selected socioeconomic characteristics.

Survey of Consumer Finances: Vol. 1, Selected Reports, 1970, Catalogue 13-550, is available for \$2.10 from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 or from Information Canada, Ottawa and Information Canada stores across Canada.

Readers who wish to have further details on these topics or have questions pertaining to the material presented may contact R.K. Chawla, Consumer Income and Expenditure Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (613-992-1695).

Other Publications of the General Time Series Staff

Publication number	Title and Description	Publication number	Title and Description
13F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the <i>Canadian Statistical Review</i> .	CANSIM Manuals and other Publications (Cont'd)	
Canadian Statistical Review Supplements		*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.40 This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)
14	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers. Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).	*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$2.10 Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)
36	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.40 (Free to <i>Canadian Statistical Review</i> subscribers). Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	—	<i>CANSIM: Summary Reference Index</i> (Annual, with periodic amendments) 1973 edition—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title from General Time Series Staff.
05	<i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to <i>Canadian Statistical Review</i> subscribers) This publication replaces the <i>Historical Summary 1963</i> (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly <i>Canadian Statistical Review</i> (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the <i>Review</i> . All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.	—	<i>CANSIM: Series Directory</i> (Annual, with periodic amendments) 1973 edition—Price \$15.00, or \$20.00 with amendment service. The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title from General Time Series Staff.
